In accordance with the provisions of Article 7, paragraph 1; Article 11, paragraph 9; Article 16, paragraph 3; Article 27; Article 29, paragraph 2; Article 30, paragraph 2; Article 31, paragraphs 3 and 4; Article 32, paragraph 5; Article 33, paragraph 2; Article 34; and Article 38, paragraph 6 of Administrative Instruction (MF) No. 01/2026 on the Use of Electronic Fiscal Devices, Fiscal Systems and Electronic Fiscal Software, and taking into account the relevant legal provisions of Article 6, paragraph 7 of Law No. 08/L-257 on the Administration of Tax Procedures, and based on the legal powers under Article 48 of the same Law, the Director General of the Tax Administration, approves:

SPECIFIC TECHNICAL AND FUNCTIONAL REQUIREMENTS FOR ELECTRONIC FISCAL DEVICES/FISCAL SYSTEMS/ELECTRONIC FISCAL SOFTWARE

GENERAL PROVISIONS

Article 1 - Purpose

The purpose of this document is to define specific technical and functional requirements to enable the functionality of Electronic Fiscal Devices/Fiscal Systems and Electronic Fiscal Software in accordance with Administrative Instruction (MF) No. 01/2026 on the Use of Fiscal Devices, Fiscal Systems and Electronic Fiscal Software.

Article 2 – Scope

This document is mandatory for:

- Manufacturers, importers or assemblers of Electronic Fiscal Equipment and Fiscal Systems;
- Institutes, Laboratories or Institutions competent and authorized for testing and verifying the fulfilment of technical and functional requirements determined by special requirements;
- Developers, Installers, maintainers and users of Electronic Fiscal Software;
- Tax Administration of Kosovo; and
- All other entities involved in the focalization process and other issues included in this document.

Article 3 - Abbreviations

For the purposes of this document, the following abbreviations have the following meanings:

- **2D Barcode** - Electronic signature generated through data encryption in the Fiscal Document;
- **FCR** – Fiscal Cash Register;
- **API** –Application Programming Interface;
- **KBRA** – Kosovo Business Registration Agency;
- **TAK** - Tax Administration of Kosovo;

- **Unique EFS Code** *(ApplicationId)*- EFS unique identification code generated by the TAK Information System after certification.
- **AES –** Advanced Encryption Standard;
- **CSV –** Comma-Separated Values;
- **CA –** Certificate Authority; Official authority that issues and manages digital certificates within the PKI
- **CRL –** Certificate Revocation List: List of invalid certificates revoked by CA.
- **FCD** – Fiscal Cash Division;
- **FD** - Fiscal Document;
- **E-POS** - Electronic point of sale;
- **EPROM** –Erasable Programmable Read Only Memory;
- **GDPR** - European Union Regulation on the Protection of Personal Data (General Data Protection Regulation)
- **GPRS** - General Packet Radio Service;
- **JSON** –JavaScript Object Notation;
- **KK** - Crypto bank card, Secure media for storing ciphers (encryption/decryption keys);
- **KM** – Memory card;
- **CSM** - Crypto Secure Module, external or internal hardware device that serves to encrypt data;
- **QR Code**– Two-dimensional quick response barcode, used to easily and quickly access information;
- **MF** – Ministry of Finance;
- **DSN** – Device serial number;
- **UINFC** – Unique Identification Number of the Fiscal Coupon;
- **OE** – Authorized Economic Operator for the supply, installation, verification, repair and maintenance of EFE/FS;
- **OCSP** – Online Certificate Status Protocol;
- **PC** – Personal computer;
- **PDF** – Portable Document Format;
- **EFE/FS** – Electronic Fiscal Equipment/Fiscal System;
- **PF** – Fiscal Printer;
- **PKI** –Public Key Infrastructure;
- **POS** – Point of sale;
- **Protobuf** –Protocol Buffers;
- **PROM – ROM** Programmable Read Only Memory;
- **ROM** –Read Only Memory;
- **RBAC –** Role-Based Access Control:
- **EFS** – Electronic Fiscal Software;
- **SSL** - Secure Sockets Layer;
- **TCP/IP** –Transmission Control Protocol/Internet Protocol;
- **IT** – Information Technology;
- **TLS** - Transport Layer Security;
- **TT** – Tax Terminal;
- **UUID –** Universally Unique Identifier;
- **VPN** – Virtual Private Network;
- **X.509 -** Standard for digital certificates in PKI
- **ECJ** – Electronic Control Journal (memory card); and
- **EFSD** – Electronic Fiscal Software Developer.

Article 4 - Definitions

1. For the purposes of this document, the following definitions have the following meanings:

1.1. **Electronic Fiscal Device / Fiscal System** - a computerized electronic device or system used to issue sales coupons for retail transactions. EFE/FS/EFS includes those electronic devices, such as: fiscal cash registers, fiscal printers and fiscal systems for special activities. A EFE/FS includes fiscal memory, daily working memory, supporting software (firmware), accurate time, coupon printing mechanism, as well as connecting control units for keyboards, TT, CSM, KM, ECJ, screens and input and output data transmission sub-units (such as scanners), which are provided to be part of the system. All components provided and functions of EFE/FS are approved or authorized by the FCD, while the supporting software (firmware) or other verification mechanism of the functions of EFE/FS must be at the disposal of TAK;

1.2. **Electronic Fiscal Software** – is electronic software developed to record and report financial transactions of taxpayers in an automated manner and in accordance with tax legislation in the Republic of Kosovo. Through EFS, supplies of goods and/or services for retail transactions are recorded, the fiscal coupon is generated and the data is reported in real time to the TAK Information System;

1.3. **Fiscal Cash Register** – is an electronic recorder of the supply of goods and/or services, cash registers that are specially equipped with fiscal memory, fiscal seal and other capabilities and devices, as defined in the technical and functional specifications published by TAK;

1.4. **Fiscal Memory** – is a stored and secure medium, it is a sub-unit in which all fiscal information is stored and kept unchangeable in the EFE/FS/EFS. The Fiscal Memory is programmed as read-only memory (read-only, EPROM, erasable programmable ROM, or PROM, programmed ROM). The fiscal memory circuits are protected in a special box which is located in a specially designed part, which is an integral part of the EFE housing. The Fiscal Memory also includes the component (casing) that records any removal or intervention in the EFE/FS housing;

1.5. **Fiscal Data Network** - is the communication network between the EFE/FS and the TAK Information System, which deals with the encrypted transmission of fiscal data through the CSM;

1.6. **Fiscal Cash Register Division** – A division established within the organizational structure of TAK, responsible for the management of EFE/FS/EFS, to review and approve EFE/FS, economic operators for the supply, installation and maintenance of EFE/FS and authorized technicians for EFE/FS;

1.7. **Final consumer** – means a non-business natural person, who uses the purchased goods and/or services for personal needs. Also, a final consumer may be considered a business natural person, legal person, partnership and grouping or association of persons including consortia and public authorities, who uses the purchased goods and/or services for business needs and not for the purpose of resale or development of their activities;

1.8. **Fiscal coupon** – is a document in which the supply of goods and/or services at the point of sale to the final consumer is recorded. The fiscal coupon is generated by the EFE/FS/EFS, which is printed on paper or can be sent electronically for specific supplies (electronic supplies). The specific characteristics of the fiscal coupon are: fiscal logo and signature with 2D barcode (QR Code). Other characteristics are defined in the document of specific technical and functional requirements for the EFE/FS/EFS;

1.9. **Coupon for Coupon** – Transmission of data from the EFE/FS to the TAK server:

- at the time of the transaction;
- at a predetermined time; and
- on demand

1.10. **Support software (Firmware)** - Software built for the operation of the EFE;

1.11. **Housing** - Memory or special space within the fiscal memory for recording interventions in the EFE/FS housing;

1.12. **TAK Information System** - Computer system that receives/sends commands and coded data towards the systems for recording traffic;

1.13. **Subscription** - Periodic fee that enables the transfer of data from EFE/FS to the TAK Information System through GPRS technology;

1.14. **Internet** - Global interconnected network of computers and other electronic devices, which uses standard communication protocols (such as TCP/IP), to exchange information and

1.15. **Payment method** - Payment through cash (CASH), debit card, credit card, bank account, check, SMS, or any other equivalent payment instrument.

1.16. **Dispenser** - means a technical unit/pump or a fuel supply station in which one or more supply nozzles for different types of fuel are installed and which are commanded and controlled by an electronic circuit (head). One or more dispensers may be installed at a point of sale (supply station).

2. Other terms used in this document have the same meaning as in the applicable Law on the Administration of Tax Procedures (hereinafter: LTAP).

Article 5 - Legal basis

Paragraph 7 of Article 6 of Law No. 08/L-257 for the Administration of Tax Procedures authorizes TAK to require the registration of supplies in electronic ways and the establishment of specifications for the types of EFE/FS/EFS that will be used for such registrations, we quote: "The Tax Administration of Kosovo may request that all supplies made by all or by certain persons be registered in EFE/FS or in software and may establish specifications for the types of electronic equipment and software used for such registration. In case of supplies made by certain taxable persons, including transactions not recorded electronically, TAK may require such taxable persons to issue coupons in the manner determined by TAK*;*

Administrative Instruction (MF) No. 01/2026 on the Use of Electronic Fiscal Devices, Fiscal Systems and Electronic Fiscal Software sets out the rules and procedures for the selection, administration, deployment, and use of EFE/FS and EFS during the implementation of economic activities in the territory of the Republic of Kosovo.

PART I

CHAPTER I
ELECTRONIC FISCAL DEVICES / FISCAL SYSTEMS (EFD/FS)

Article 6 - Authorization of Economic Operators

1. The Director General of TAK authorizes the Fiscal Cash Registers Division (FCRD), which is responsible for reviewing requests for authorization of Economic Operators, EFD/FS Certification Laboratories, EFD/FS Technicians, as well as issuing decisions for the relevant equipment, after successfully passing all tests for specific EFD/FS models.
2. FCRD will verify and take all appropriate measures regarding the fulfilment of the criteria of each EFD/FS model, to certify and license them, in order for them to be used by any taxpayer obliged to be equipped with EFD/FS.
3. FCRD, when necessary, will cooperate with all departments in TAK and with the bodies responsible for the supervision, monitoring and/or licensing of any other electronic, electrical or electro-mechanical subsystem, which may be connected to or communicate with the EFD/FS, in order to provide them with the data necessary for adequate functioning, with the aim of forming the final judgment and taking the appropriate decision for licensing or non-licensing of a specific model of EFD/FS.
4. For issuing a decision for the certification of a model of EFD/FS, FCRD will take into account that:
   4.1. a prototype sample of the specific model of EFD/FS meets the technical and functional characteristics specified in this document;
   4.2. the interested party (manufacturer, importer or seller) has trained personnel that enables servicing and maintenance of the EFD/FS, as well as provides evidence for the supply of spare parts, as specified by a sub-legal act;
   4.3. the interested party (manufacturer, importer or seller) is not in financial difficulty and can ensure a stable functioning of the business;
   4.4. during production or during any import, it is possible for FCRD to verify that the EFD/FS comply with the prototype sample provided during the certification process.
5. FCRD has the right to assign the testing procedures for sub-licensing models to institutions or other academic bodies or organizations that possess the necessary knowledge and laboratory equipment for testing and to cooperate with them on any similar matter or technical assistance. The designated institution or academic body must prepare a special report for FCRD regarding each test performed. The cost/expenses incurred as a result of these tests shall be borne by the interested party (manufacturer, importer or seller) of the EFD/FS or the owner of the designated EFD/FS.
6. FCRD has the right to examine all aspects deemed necessary for taking the appropriate decision, after issuing the appropriate license, to review whether the obligations arising from the above-mentioned cases (4.2, 4.3 and 4.4) are fulfilled. For this purpose, the interested party - the applicant (manufacturer, importer or seller) must provide the FCRD with any additional information requested. The EO of a certified model of EFE is obliged to support with spare parts and maintain EFD/FS, which are in use by taxpayers for at least five (5) years from the last date of sale of

EFD/FS on the Kosovo market, until the end of the transitional period, or until the period determined by another decision of the relevant Minister of Finance;

Article 7 - Authorization of Economic Operators of EFD/FS

1. EFD/FS and TT models for use in the Republic of Kosovo must be built by the manufacturer according to the functional and technical requirements set out in this document.
2. It is within the competence of FCRD to approve different EFD/FS models and to issue a certificate with a registered number for the approved models. In order to verify continuity and compliance with the initial certified version, these approved models must be re-certified by FCRD every four (4) years. Only models with such a certificate may be sold and installed in the Republic of Kosovo.
3. Manufacturers / Importers, when applying to FCRD for the approval of a model, must provide a device of that model and the following documents:
   - User manual;
   - Service manual;

4. Tests to verify compliance with the Technical and Functional requirements:
   4.1. are carried out by Institutes or Laboratories Authorized by TAK, with relevant knowledge and laboratory testing equipment. Any technical documentation related to the testing of the Equipment that the Institute (Laboratory) needs, Economic Operators are obliged to provide. At the end of the testing, the Authorized Institutes or Laboratories prepare a report with the test results and submit it to the FCRD;
   4.2. if the EFD/FS that is tested has intermediary equipment (interface) to connect to the measuring equipment or measuring systems (e.g., fuels, etc.), this equipment are approved as a fiscal system.
   EFE that are part of a fiscal system for specific sectors, have special requirements, which are presented through special specifications for points of sale in these sectors (e.g., for oil / hydrocarbon companies, taxis, etc.);
   4.3. If the fiscal device being tested has an interface to connect to other peripheral devices such as bar code scanners, magnetic card readers, etc., these peripheral devices must not change the functions of the fiscal device. This is verified through functional testing.

Article 8 - Use of Certified Equipment, Supplied and Installed by Authorized Economic Operators

1. Retail transactions made in Kosovo in accordance with applicable legislation must be recorded in the EFE/FS.
2. The term EFE includes those electronic devices such as: fiscal cash registers and fiscal printers. EFE and/or FS is intended to record and transmit data to the TAK server. The devices are used as stand-alone units or included in fiscal systems for issuing fiscal coupons. The issuance of fiscal coupons does not depend on the method of payment (cash payment, payment by credit card or through equivalent payment instruments, e.g., by check, etc.). The data must be recorded simultaneously in the operational memory and in the ECJ, as well as printed on the fiscal coupon.
3. EFE/FS must be equipped with a Secure Crypto Module (SCM) as a hardware unit and a Crypto Card (CC). CSM aims to encrypt fiscal data that will be transferred from the EFE/FS to the TAK server via TT. The purpose of the KK is to enable a secure connection between the EFE/FS and

the TAK server for information exchange. The EFE/FS must be able to respond to all requests (on-demand) from the TAK server for various information (such as fiscal coupon, x-report, etc.).

4. The EFE/FS must be equipped with an external or integrated TT. “Integrated TT” means a separate hardware module installed inside the EFE/FS housing and that is connected to the main EFE/FS module by means of cables or connectors, or it can be a separate hardware module included in the EFE/FS functionality in a firmware and as an integrated TT uses all the EFE/FS resources. The purpose of this terminal is to transfer reports from the EFE/FS to the TAK information system. The totals of data stored in the operational memory of a day are stored in the fiscal memory after the closing of the daily fiscal report.
5. EFE/FS users may only use certified equipment, supplied and installed by licensed Operators to ensure:

   5.1. complete and correct recording of transaction details by the EFE/FS;

   5.2. transfer of the content of the EFE/FS fiscal memory to the TAK system; and

   5.3. to exclude any manipulation of data during and after the recording of transactions.
6. Before a EFE/FS is installed and registered for operation, the EFE/FS user, with the licensed Economic Operator, must sign a written contract for the servicing and repair of the EFE/FS of the certified model. The Licensed Economic Operator places the identification label on the box (house) of the EFE/FS.
7. The form of the identification label at the beginning of use must contain the following information:

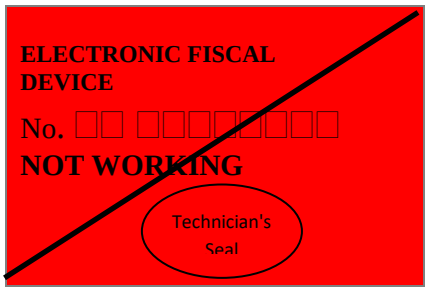

CE Voltage 230 V	Economic Operator	XXX
	Model	XXX
	Serial Number	XXX
	TAK License No.	XXX

8. Installation of the EFE/FS before the start of recording transactions.
9. The process of installing certified EFE/FS is carried out after adequate training for the work by the equipment supplier. The periodic control label (self-destructive adhesive paper) is placed on the equipment in a visible place where it cannot be damaged during use.
10. An electronic request is sent from the EFE/FS to the TAK server for registration and approval. After approval of the request, the normal operation of the EFE/FS and the exchange of secure data with the TAK server are enabled, as defined in Article 24 of the Administrative Instruction (MF) No. 01/2026 on the Use of Electronic Fiscal Equipment, Fiscal Systems and Electronic Fiscal Software.
11. The initial and periodic control and the form of the periodic control label verify the correct functioning of the EFE/FS.
12. The periodic inspection of the EFE/FS shall be carried out, as specified in Article 24, paragraph 10, of Administrative Instruction (MF) No. 01/2026.
13. The periodic inspection label, before the start of use, shall be placed on the EFE/FS to ensure that the device operates in accordance with the specifications according to this document. This inspection shall be carried out before the expiry of the period specified in Article 24, paragraph 10, of Administrative Instruction (MF) No. 01/2026, but not earlier than forty-five (45) days before the end of this period.

- **Shape:** square;
- **Lateral dimensions:** > 40 mm;
- **Colour:** Green rubric, with large black letters;
- **Under the text Electronic Fiscal Device**, the identification number of the EFE/FS is placed;
- **Expiration date:** dd/mm/year is placed in the middle of the label under the text "YEAR";
- **Seal:** the seal of the authorized technician will be placed in the ellipse, which identifies the Economic Operator and the technician responsible for carrying out periodic checks; and
- **Material:** adhesive that does not allow removal without being damaged during the removal attempt.

14. If the EFE/FS fails the periodic inspection, the authorized technician must place the negative periodic inspection label (sample label below) in a visible place on the equipment. Also, an information letter must be sent to the Tax Administration of Kosovo.

- **Shape:** square;
- **Lateral dimensions**: > 40 mm;
- **Colour:** Red rubric with black capital letters, crossed out with a diagonal;
- **Fonts:** Bold, height 5 mm;
- **Under the text Electronic Fiscal Device**, the identification number of the EFE/FS is placed;
- **Under the text NOT WORKING**, in the ellipse is marked the seal that identifies the Economic Operator and the technician responsible for carrying out the control;
- **Material:** adhesive that does not allow removal without being damaged during the removal attempt.

The date and time when the EFE/FS were removed from use must be noted in the accompanying booklet.

15. A special accompanying booklet must be kept by the taxpayer for each EFE/FS, in which all interruptions of operation, all checks, all maintenance/repairs and all other actions undertaken on the EFE/FS are recorded.

16. The 2D barcode represents the electronic signature of the printing of fiscal documents, and is stored in the EFE/FS's ECJ. The graphic information of the 2D barcode is generated by the CSM.

    The content of the 2D barcode will be as follows:
    - The 2D barcode is of the QR code type;
    - The printed size of the 2D barcode must be at least 12 mm x 12 mm;
    - The printed 2D barcode cannot contain photos or logos;
    - Fiscal Number/Unique Identification Number;
    - EFE/FS serial number;
    - Date and time of printing the fiscal coupon;
    - Fiscal coupon number;
    - Total value of the fiscal coupon;
    - Electronic signature (encryption of data in the fiscal document, e.g. 47d6789264c3bf901e30af79108feaa8).

17. The Economic Operator must not program the EFE/FS or influence it in other ways that hinder or block the functionality of the EFE/FS in certain periods or deadlines.

18. The Economic Operator is obliged to make interventions and eliminate the malfunction of the EFE/FS, according to the requests of taxpayers and TAK for servicing and maintenance of the EFE/FS, within a period not later than forty-eight (48) hours from the moment of the problem appearing.

Article 9 - Fiscal Coupon Issued through EFE/FS

1. The fiscal coupon is a paper document, printed by the EFE/FS, in which the sale of goods and/or services is recorded at the point of sale for the final consumer. The special characteristics of the fiscal coupon (as well as any other fiscal document) are: fiscal logo and signature with 2D barcode generated by the CSM. Other characteristics are defined in the annexes attached to this document.

2. The fiscal coupon must have at least 18 characters per printed line and must end with a 2D barcode generated by the CSM and the fiscal logo. The fiscal logo is defined in the Annex to the EFE/FS - Annex “A”, while the content and examples of fiscal coupons are defined in the Annex to the EFE/FS - Annex “B” of this document.

Article 10 - Daily Fiscal Report (DFR) and additional Modes

1. ***Daily Fiscal Report (DFR)*** - is a paper document, issued by the EFE/FS, certified by the Tax Administration. The DFR is a document in which the summary of the sale of goods and/or services at a point of sale is recorded, regardless of the payment method. The main purpose of the summary is that the data on the total turnover and VAT during the day are printed and recorded in the fiscal memory of the EFE/FS. Before this report is printed, a 2D barcode must be generated by the CSM.

2. ***Fiscal Logo*** - at the end of the DFR the fiscal logo must be printed. The content of the DFR is defined in Chapter 2 of this document, while examples of DFRs from the EFE/FS are given in Annex "B" of this document.

3. ***Additional modes and relevant reports of the Electronic Fiscal Device / Fiscal System***
In addition to the Registration mode (R), each EFE/FS must also work in the following modes:

3.1. **Report Reading Mode (X)** - Each EFE/FS must allow reading and printing of the current data accumulated during the day and the data recorded in the fiscal memory.

3.2. **Daily Fiscal Report Mode (RFD)** - Each EFE/FS must allow reading and printing of a summary of the final data accumulated during the day and writing a summary of this data to the fiscal memory. In this mode, the RFD is created.

3.3. **Programming Mode (P)** - Enables recording in the fiscal memory of the taxpayer data, which must be presented on the fiscal coupon

- The possibility of programming at least four (4) tax rates. Tax rates are written in the fiscal memory. This is allowed at the time of installation or after closing the daily tax report and transmitting the "Z" data to the ATK. There must be the possibility of presenting the different tax rates with the letters "A" to "E". The letter "A" means the tax rate exempt from VAT, while the letters "B" to "E" the different forms of VAT tax rates provided for by the VAT Law. The change of the tax rate occurs only after the daily tax report is finalized and the relevant data has been transmitted to the relevant fiscal memory. Changes in the fiscal memory can be made within the special content for changing tax rates. Changes to the tax rate are carried out by the maintainer based on the special manual for changing tax rates;
- Allowing the programming of communication parameters with the TAK communication network for the transmission of periodic tax reports; and
- Allowing the configuration and reading of fiscal memory.

3.4. **Fiscal memory content transfer mode** - In this mode, the EFE/FS must have the ability to transfer the fiscal memory content to the PC.

During the approval process, the fiscal memory content is checked through a program on the PC, which ensures that the fiscal memory content is correctly recorded in a file on the PC disk. In addition, this program must provide the ability for the fiscal memory content to be viewed on the PC monitor as read-only.

If additional hardware devices are required for the transfer of the fiscal memory content, they must be provided by the manufacturer. Detailed descriptions for the use of the reading function must be in the instructions.

The authorized EFE/FS service technician is obliged to provide additional software and hardware and to provide service whenever requested by TAK.

To administer:

- Items:
  - item code;
  - names of goods or services;
  - price.
- Discounts;
- Payment methods;
- Administers graphics (taxpayer logo to be placed on the fiscal coupon, if the device has this option);

- Administers the serial ports of the fiscal device for programming them to connect to accompanying devices, such as: bar-code scanners, scales, credit card payment terminals, etc.

3.5. **Date and time programming mode**

The firmware prevents the date from changing until the date of the last daily report recorded in the fiscal memory. It allows the programming of the legal time within a single limit of +/- one hour, only after the RFD is closed.

4. ***Other modes***

Each EFE/FS must allow its functional testing, enabling connection to a personal computer or other device.

CHAPTER II
FUNCTIONAL REQUIREMENTS FOR EFE/FS

Article 11 - Functional Requirements for Electronic Fiscal Equipment / Fiscal Systems

1. ***General requirements for Electronic Fiscal Equipment / Fiscal System***

All EFE/FS used for recording and storing electronic fiscal data, as defined by Administrative Instruction (MF) No. 01/2026 on the Use of Electronic Fiscal Devices, Fiscal Systems and Electronic Fiscal Software, must contain a working memory and a fiscal memory. The data that must be recorded and stored in the working memory and in the fiscal memory related to the goods sold and the services provided to customers, enable the creation of fiscal reports automatically, as required by the aforementioned Administrative Instruction.

EFE/FS must have an integrated Firmware, which according to this document will provide the usual functions for recording commercial operations for the sale of goods and services, controlling the printer, display, keyboard, tax terminal and other peripheral devices.
The integrated firmware must provide the functions for controlling the recording of data in the fiscal memory. This integrated firmware must be stored in a non-volatile memory (memory, which stores data without having a power supply) and the construction of the EFE/FS must guarantee that it is impossible to delete, change or replace the firmware.

The EFE/FS must be able to work in the following modes: online (on-demand) and offline.
The EFE/FS must meet international CE standards.

2. Reports

The EFE/FS must provide daily, monthly and other periodic reports of recorded sales.

3***. Data security***

The EFE/FS must provide security of data stored in the fiscal memory and ECJ, and must prevent changes and deletion of data in the fiscal memory and ECJ.

4. ***Control by tax officials***

The EFE/FS must provide functions that would allow tax officials to print/generate data stored in the fiscal memory from the EFE/FS keyboard and the TAK server.

5. ***Overfilling in registration mode***

In cases where overfilling occurs in registration mode, the EFE/FS must be blocked until an RFD is printed and the accumulated data is stored in the fiscal memory, and automatically transmit the data to TAK after closing each “Z” report.

6. ***Periodic reports***

EFE/FS must provide functions for creating periodic reports from fiscal memory, when:

a) The value of the accumulated turnover for each of the VAT rates for a period is not greater than 199,999,999,999.99;

b) The value of the total accumulated turnover is not greater than 199,999,999,999.99;

EFE/FS must contain a test mode to check that all functions related to the fiscal memory operate without errors and problems. Also, the device shall provide a function for printing a control summary of the integrated firmware.

7. Electronic Fiscal Device / Fiscal System, when the power supply is interrupted

When the power supply is interrupted during the operation of the EFE/FS, then after the power supply is reconnected, the operation of the EFE/FS must automatically continue from the point where it was interrupted. When the power supply is interrupted during printing, then after the power supply is restored, the EFE/FS must print a special line "POWER FAILURE". The last printed line must be printed once again.

8. Currency used in the Electronic Fiscal Device / Fiscal System

In the registration mode, the EFE/FS will be able to start working with prices, which are whole numbers (000) and with two digits after the decimal point (of the type 0.00). The currency used in the EFE/FS must be euros (€).

9. Sale or Return (Cancellation) of an Item

The EFE/FS shall allow the sale or return/cancellation of items/services only when they are previously programmed in memory, with a name and a letter for the relevant VAT rate.

a) The EFE/FS shall provide sufficient memory space for the programming of at least 500 items with names, prices and VAT rates.

b) When items with free price determination (non-programmed) are sold (non-programmed price) the VAT rate of the item must be recorded for these items.

10. Procedure for returning (cancelling) items sold through the Electronic Fiscal Device / Fiscal System

Returning (cancelling) an item when the fiscal coupon has expired will be possible only if the item is replaced with a new item that has the same VAT rate as the returned item. The newly purchased items must be of the same price or a higher price than the price of the returned item. If this is not possible, the returned item will be possible only if the original coupon is returned. Returns (cancellations) must be recorded in a separate book.

11. VAT rates

EFE/FS must allow automatic calculation of VAT for at least four different VAT rates. Each VAT rate is marked with a Latin letter: "A", "C", "D", "E". The rate marked with the letter "A" is exempt from VAT (exempt from VAT). The percentage of VAT rates must be programmed and stored in the fiscal memory before registering the EFE/FS. A tax rate change can only be made after the RFD is performed, and the EFE/FS is in service mode. These changes are recorded in the fiscal memory with a special counter for tax rate changes up to twenty (20) times. EFE/FS, for circulation for different VAT rates of goods sold/returned cannot have negative values.

12. Fiscal Electronic Device / Fiscal System Date

When a change is entered in the current date of the EFE/FS it will check if the date is correct. The recorded date cannot be earlier than the last recording in the fiscal memory or in the ECJ. When an attempt is made to record an earlier date, the EFE/FS will be blocked until the correct date is recorded. When the recorded date is more than one day late from the current date in the EFE/FS, the EFE/FS will request confirmation in order to avoid typing errors.

13. Electronic Fiscal Device / Fiscal System Meters

The daily report records in the fiscal memory all EFE/FS meters. After the RFD, the EFE/FS meters must start counting from the number "1". Exceptions are meters with special requirements. They are

described in this document. Such meters are: the RFD meter or the meter of documents issued by the EFE/FS.

14. Daily Fiscal Report Meter Format

The RFD meter must be at least four (4) digits.

15. Format of the document counter of the Electronic Fiscal Device / Fiscal System

The counters for documents issued by the EFE/FS must be at least eight (8) digits.

16. Electronic Fiscal Device / Fiscal System in case of error

The EFE/FS must automatically prevent further operation, when an error is detected, until the error is eliminated.

17. Electronic Fiscal Device / Fiscal System Reports

The EFE/FS must enable the generation of data for periodic reports (daily and on request) on the amounts of turnover with VAT and the amounts of VAT separately for each VAT rate (at least four).

18. Control functions of the Electronic Fiscal Device / Fiscal System

The EFE/FS must have the capacity, when during the recording mode the maximum accumulation figures have been reached, to block the EFE/FS until an RFD is printed and until the data is stored in the fiscal memory, as well as to transmit the data automatically to the TAK after the closing of each "Z" report. In such a case, it must be possible to provide two daily reports for the same day.

19. Electronic Fiscal Device / Fiscal System, if the printing mechanism is out of order

The EFE/FS must prevent the recording of transactions, if the printing mechanism is out of order or if the device has run out of paper.

20. Fiscal Electronic Device / Fiscal System if fiscal memory is out of order

If the fiscal memory is out of order or its capacity is full, the EFE/FS must stop its work and prevent any further action. In this case, the intervention of an authorized technician is required.

21. Alternative power supply

The EFE/FS must have a rechargeable battery or alternative power supply, in case of a power outage. When the power supply is interrupted during the operation of the EFE/FS, the operation must continue automatically from the moment the power supply was interrupted during printing. The EFE/FS must print a special line "POWER FAILURE". After adjusting the power supply, the last printed line must be printed once again.

22. Printing of the Daily Fiscal Report in cases where no transaction has occurred

Each EFE/FS must be able to create a RFD even if no transaction has occurred during twenty-four (24) hours. EFE/FS must force the EFE user to create a RFD when more than 24 hours have passed since the last RFD.

23. Electronic Fiscal Device / Fiscal System equipped with an Electronic Control Journal (Memory Card)

After the implementation of the ECJ, any information written in this journal must be followed by automatic control reading and confirmation that the data has been stored correctly. If the data in the ECJ is corrupted, the EFE/FS must block the recording mode.

24. Multilinguality parameter

The EFE/FS must have a parameter for multilinguality. This parameter must have two (2) states. Depending on this condition, the EFE/FS must work in Albanian and Serbian. It must be possible for the state of this parameter to be changed after each fiscal coupon and after each report. The EFE/FS messages, the names of the items, the words in the header and footer of the fiscal coupon must be changed depending on this parameter. The letters of the alphabet must be Latin letters including the special characters of the Albanian and Serbian languages.

25. ***Confirmation from the Electronic Fiscal Device / Fiscal System***
In case the transaction value is one thousand euros (1,000€) and more, the EFE/FS must automatically display the window through which the EFE/FS user must confirm whether the transaction is correct or not.

Article 12 - Fiscal memory requirements

1. Special Module
The construction of the EFE/FS must include a special module called "Fiscal Memory". This module must be enclosed as a module and must be enclosed in the construction (house) of the EFE/FS. The module shall provide non-volatile memory space (memory that stores data without having to supply electricity) of the data stored in it, for not less than ten (10) years. The manufacturer or importer is obliged to provide software programs for the regeneration of the information stored in this module.

2. ***Fiscal memory capacity***
The fiscal memory capacity shall be sufficient to store at least one thousand eight hundred and fifty (1,850) RFD of the EFE/FS. For sector-specific EFEs (e.g., for fuel retailing), structural changes to the content and physical capacity of the EFE fiscal memory are permitted, without compromising the integrity of the records and by providing a capacity as close as possible to the minimum number of RFDs. RFDs must have a fixed structure. When the number of RFDs remaining in the fiscal memory is equal to or less than fifty (50), then each RFD of the EFE/FS must print information about the number of RFDs remaining, for which there is free space in the fiscal memory. The EFE/FS will stop any further action when there is no more storage capacity.

3. ***Information recorded in the fiscal memory before starting work***
The EFE/FS must be put into operation only after the following information has been recorded in the fiscal memory:

a) Taxpayer ID number (Fiscal Number/Unique Identification Number) (13 characters);
b) VAT number (if the business is registered for VAT);
c) Taxpayer address;
d) EFE/FS serial number, two characters for the identification of the licensed Operator, two digits identifying the type of certified EFE/FS, as well as six (6) digits of the device serial number;
e) Date, hour and minute when the EFE/FS was put into use;

For points b, c, (as a group) at least 20 changes must be enabled.
It must be impossible to change the above information during the use of the EFE/FS.

4. ***Data stored in the fiscal memory***
The data stored in the fiscal memory, related to the RFD, periodic reports and information on the date of commencement of the operation, are as follows:

a) RFD number (XXXX - 4 digits);
b) RFD date (XX XX XX - 6 digits), in the format dd MM vv;

c) From the RFD, the daily sales turnover for at least four (4) VAT rates up to the amount of 19,999,999.99;
d) From the RFD, the daily tax value for each VAT rate. The maximum tax value for each VAT rate must correspond to the maximum daily sales value for each VAT rate;
e) From the RFD, the number of fiscal coupons issued in the registration mode;
f) Message about loss of turnover due to Memory interruption;
g) VAT rates and their changes;
h) Place of decimal point in the price of the item and in its register (history);
i) Date, hour, and minutes when the EFE/FS was fiscalized;
j) Payment method.

5. ***Interruption of the working memory operation***
When the daily turnover is deleted or lost from the EFE/FS memory due to malfunction, the EFE/FS must write to the fiscal memory the register with information on the date, hour, and minutes of the regeneration process. It also counts this event by setting a special counter for memory failures. When printing the RFD, the EFE/FS must print "MEMORY INTERRUPTION", UNIT XXXX, dd, hh, mm".

6. ***Structure and control over the information recorded in the fiscal memory***
Each data stored in the fiscal memory must have a fixed block structure that contains a checksum for the block. The checksum guarantees that the data in the block has not been changed. Each recording in the fiscal memory is accompanied by a reading and confirmation that the data has been stored correctly. If any error is found in the data, the EFE/FS must block the recording mode.

Article13 - Requirements for the Electronic Fiscal Device/Fiscal System for data presentation and printing

- ***Printing mechanism***

The EFE/FS shall have an alphanumeric printing mechanism, which allows the printing of a coupon per consumer. Each print from the printing mechanism implies an identical recording also in the Control Journal Electronic.

- ***Electronic Control Journal Formats (memory card)***

The information for the ECJ that is created simultaneously with that of the consumer must be stored in a non-volatile memory (type: SD, mini-SD or micro-SD) with a capacity of at least 4GB. In the ECJ, copies of all printed documents are stored in electronic format and as such can be printed whenever necessary.
This module will not allow any changes to the data already stored. The RFD can be printed from the ECJ whenever required.

After printing, the ECJ is not deleted. This allows the ECJ content to be printed at any time, when necessary, by selecting the RFD number or its date.
In this case, each fiscal coupon will contain the number of the RFD in which it is included and its number in it.
If this module is a standard SD card, then it must be protected from: modification, deletion, etc. by implementing protection mechanisms available for standard SD cards.

With this type of ECJ, EFE/FS can provide a separate printout for:

- Each fiscal coupon;
- Each RFD;
- Periodic reports for certain periods;
- The numbers of the first and last RFD stored in the ECJ;

- The memory card must contain a history of all specific data since the functional start of the EFE/FS;
- When the memory card capacity is full, EFE/FS blocks the work until it is replaced;
- The user must not have access to the memory card;
- In the absence of the ECJ, the EFE/FS must not function;
- The EFE/FS must warn with a message about the remaining capacity of the ECJ, if the remaining space of the ECJ capacity is less than 5% of its total capacity during the printing of the RFD.
- The ECJ will continue to be current until the EFE/FS writes the circulation to another empty ECJ. In this case, the old module will only serve to read its information from that EFE/FS, in read-only mode.

- ***Minimum character limit in a printed document***

Each document printed by the EFE/FS shall have at least eighteen (18) characters, as well as the incorporation of the relevant elements of the fiscal coupon for the printing line on paper at least twenty-eight millimetres (28 mm) wide and it must contain:

a) **The header of the document**, with no less than one hundred and fifty (150) characters (empty lines are not printed) used for:

- Taxpayer's fiscal number/Unique Identification Number;
- VAT number, if the taxpayer is on VAT;
- Taxpayer's name;
- Taxpayer's address;
- Name and address of the unit and when there is no unit, the text "street sales";
- In the network of units, the local EFE/FS number (at least 2 digits) and only for the fiscal
- coupon, the operator's name and operator number;
- Other necessary data.

b) **The end of the document with**:

- The incremental number of the document;
- The date, hour and minutes of issuance;
- The identification number of the EFE/FS;
- The serial number of the fiscal memory;
- Until the EFE/FS is fiscalized, it will print the text “NON-FISCAL COUPON” on each document;
- When the EFE/FS is fiscalized, it will print the text “NIFISCAL COUPON” on the last line of the consumer coupon, on the last line of the RFD and on the last line of all reports from the fiscal memory, and after that on the next line the fiscal logo. The text “NIFISCAL COUPON” will be printed on all other documents. When necessary, it is allowed to print only one copy of the fiscal coupon. In this case, this copy will be marked as “COPY” printed in double-width font. The copy is a non-fiscal coupon;
- 2D Barcode;
- Free text.

- ***Printing the fiscal coupon***

Each EFE/FS must have the ability to print the fiscal coupon for the supplies made to each customer. The fiscal coupon is issued in an original copy and stored in the ECJ. If necessary, a copy of the original coupon can also be printed at any time (In this case, this copy will be marked as “COPY OF COUPON”).

The fiscal coupon must be legible and must contain the following data:

- Header of the coupon;
- EFE/FS ID at least two (2) digits in case more than one EFE/FS is installed in a location;
- Name of the Operator and its number;
- The sequential number of the issued coupon;
- The date and time of the transaction;
- At least one line for each item, the quantity multiplied by the unit price, the name of the item or service or its abbreviation, the value of the quantity supplied and the VAT rate marked with a specific letter for each item supplied. When the quantity is one, it is possible that the quantity and price are not presented;
- The percentage (or value) of the discount and its amount with a minus sign or the percentage (or value) of the increase if any for the item;
- The amount of the subtotal, the percentage (or value) of the discount on it and its amount with a minus sign, the percentage (or value) of the excess if any;
- The total amount for payment;
- Amounts paid in different ways;
- Amounts of tax according to different active tax rates;
- Total amounts without tax;
- The end of the coupon/document.

Between the line with the text "FISCAL COUPON" and the fiscal logo, an increasing number of the consumer/client's fiscal coupon issued during the day is printed.

Examples of fiscal coupons are given in the appendices at the end of this document.

- ***Daily Fiscal Report (DFR) must contain***:
  - *Document header;*
  - *Report name and number;*
  - *First part of the report*:
    - customer count (fiscal coupons);
    - total amount recorded in the "drawer" of the EFE/FS;
    - count and amount of price increases;
    - count and amount of price reductions;
    - total net amount of turnover including VAT;
    - type of payment and amount for each type of payment;
    - total net amount in cash of turnover including VAT;
    - amount of cash received (by the manager);
    - amount paid in cash (to the manager);
    - total amount of cash in the drawer.
  - *Second part of the report*:
    - VAT rate A excluding VAT;
    - Total turnover per rate amount;
    - Turnover excluding VAT amount;
    - VAT amount;
    - Total turnover per rate amount;
    - VAT rate C --%;
    - Turnover excluding VAT amount;
    - VAT amount;
    - Total turnover per rate amount;

- VAT rate D --%;
- Turnover excluding VAT amount;
- VAT amount;
- Total turnover per rate amount;
- VAT rate E --%;
- Turnover excluding VAT amount;
- VAT amount;
- Total turnover per rate amount;

……..
repetition for all active VAT rates
……..

- total turnover amount excluding VAT;
- total tax (VAT) payable;
- total turnover amount including VAT;
- fiscal coupon count;
- memory failure count;
- total accumulated turnover amount including VAT for EFE/FS since fiscalization;
- total accumulated tax amount (VAT) to be paid for EFE/FS since fiscalization.

- *Third part of the report*:
  - Text "EFE/FS has been cleared";
  - RFD number in fiscal memory;
  - Count of empty RFDs in fiscal memory.
- *End of the document*.

RFD example is given in the appendices at the end of this document.

- ***Detailed periodic report***

Printing the detailed periodic report from fiscal memory will include:

- *Document header;*
- *Report name;*
- *Period start date number;*
- *Period end date number; and*
- *Date, hour and minutes of fiscalization.*
- *The first part of the report contains*:
  - Serial number of the relevant VAT rate and the RFD number;
  - Date, hour and minutes when the VAT rates were registered;
  - Decimal point position;
  - All active VAT rates and their values.

- *The second part of the report*
  - Serial number and date of the RFD;
  - Fiscal coupon count;
  - Turnover according to VAT rate A amount;
  - Turnover according to VAT rate C amount;
  - Turnover according to VAT rate D amount;
  - Turnover according to VAT rate E amount.

.....
repetition for all active VAT rates
.....

- Tax (VAT) payable according to VAT rate D amount;

.....
repetition for all active VAT rates
.....

- Total turnover amount including VAT for RFD;
- Total tax (VAT) payable for RFD.

……..
repetition part 2 for all RFDs with these VAT rates in the period.
.....
repetition parts 1 and 2 for all VAT rates if VAT rates have changed in the period.
……..

- *The third part of the report contains*:
  - Calculation of RFD in the period;
  - Total turnover amount including VAT for the period;
  - Total tax (VAT) payable for the period;
  - Calculation of fiscal coupons in the period;
  - Turnover according to VAT rate A amount;
  - Turnover according to VAT rate C amount;
  - Turnover according to VAT rate D amount;
  - Turnover according to VAT rate E amount;

.....
repetition for all active VAT rates in the period
.....

- Tax (VAT) to be paid according to VAT rate D amount;

.....
repetition for all active VAT rates in the period
.....

- *End of the document*.

An example of a detailed periodic report from the fiscal memory is given in the Appendices at the end of this document.

7. ***Short periodic report***

Printing a short report will include:

- *Document header;*
- *Report name;*
- *Starting period number;*
- *Ending period number;*
- *Fiscalization date, hour and minutes;*
- *First part of the report*:
  - Calculation of RFD in the period;
  - Total amount of turnover including VAT for the period;
  - Total amount of tax (VAT) to be paid for the period;
  - Calculation of fiscal coupons in the period;
  - Turnover according to VAT rate A amount;
  - Turnover according to VAT rate C amount;
  - Turnover according to VAT rate D amount;
  - Turnover according to VAT rate E amount.

.....
repetition for all active VAT rates in the period
.....

- Tax (VAT) to be paid according to VAT rate D amount;

.....

repetition for all active VAT rates in the period

.....

- *End of document.*

An example of a short periodic report from the fiscal memory is provided in Appendix "B" of this document.

- ***Initiation and generation of reports (on demand) from the TAK server***

The TAK server can at any time establish communication (on demand) with the EFE/FS and can request information regarding:

- Fiscal coupon details;
- Short periodic report;
- Detailed periodic report;
- Daily Fiscal Report;
- "X" Report; and
- Total fiscal coupons.

- ***Report transmitted to the TAK system***

In a special mode, the EFE/FS will provide the ability to send a periodic report to the Tax Administration server via TT. The requirements for this periodic report are described in Article 13 of these functional requirements. Successful transmission of this report will result in the automatic printing of its summary, which will contain:

- *Document header;*
- *Report name;*
- *Period start date;*
- *Period end date;*
- *Fiscalization date, hour and minutes;*
- *First part of the report*:
  - Calculation of RFD in the period;
  - Total amount of turnover including VAT for the period;
  - Total amount of tax (VAT) to be paid for the period;
  - Calculation of fiscal coupons in the period;
  - Turnover according to VAT rates amount;
  - Tax (VAT) to be paid according to VAT rates amount;
- *Number of RAM resets;*
- *Payment method (cash, card, etc.);*
- *Text "Transmission OK" if the transmission was successful or text "Transmission not OK" if the transmission was not successful.*
- *End of document.*

An example of the report printed by the EFE/FS after successful transmission of the periodic report to the TAK server (via TT) is provided in Annex "B" of this document.

- ***Document currency***

All amounts recorded or accumulated are expressed in EURO (€).

- ***Requirements to be adhered to by the Fiscal Electronic Device / Fiscal System***

EFE/FS will adhere to these requirements.:

- It is allowed to print more information if this would increase the functionality and user experience of the EFE/FS;
- It is allowed not to print some parameters when their value is zero and the document is readable;
- When printing an item report it is necessary to print the specific character of the VAT rate.

- ***Data printing***

Thermal paper characteristics for Electronic Fiscal Equipment / Fiscal System

Data printing must be performed on the EFE/FS ribbon (paper), which retains data for at least five (5) years according to the information retention criteria for thermal paper and which has the following characteristics:

- Whiteness rate 85% (measured by ELEPONI-m-UNI-7623/86);
- Softness level 30 ml/s (BENDSTEN-UNI-7626/I/II/86);
- Base paper Ph>7.

The EFE/FS user is obliged to use paper according to the specifications described above.

Article 14 - Requirements for Crypto Security Module (CSM) and Crypto Card (CC)

The Crypto Security Module (CSM) is a hardware device used for encryption and electronic signature of fiscal coupons, daily and periodic reports, before printing them and sending them to the TAK server.
The CSM can be an external unit or a unit within the EFE/Fiscal System.
The CSM should contain these parts:

- Processor;
- Memory;
- Crypto card (CC).

Before the end of printing the fiscal coupon, daily and periodic reports, the data generated by the EFE/FS are transmitted to the CSM, which generates a unique 2D barcode, which contains encrypted information about the content to be printed.
The CSM must enable the generation of a unique 2D barcode for all documents even when there is no communication with the TAK server, i.e., the signing of all documents must also function in off-line mode.
The CSM transmits the data to the TAK server through TT. The CSM initiates communication through TT to establish a connection with the TAK server. The TAK server communicates with the CSM through TT. If there is no communication or communication is interrupted between the EFE/FS and the CSM, the EFE/FS stops working and gives an error message.
The Crypto Card, without the need for changes, must be functional and maintain the system security standard.
The KK is part of the CSM and serves only for storing encryption keys.
The KK must be certified according to CC (command criteria) EAL 5+.
For the form of communication between the EFE/FS and the server, TAK prepares the relevant infrastructure and provides all information regarding communication protocols and other technical issues.

1. Cryptomodule Specifications

- The crypto module is used for signing with 2D barcodes of documents printed by EFE/FS.
- All data generated by EFE is sent to the Crypto module before the fiscal documents are printed, which returns unique 2D barcodes with encrypted data from the fiscal documents.
- The crypto module digitally signs the documents produced by EFE/FS.

- The unique 2D barcode is sent to the fiscal device and printed on the fiscal coupon.
- The electronic signature of the fiscal coupon must be stored in the ECJ of the fiscal device.
- The crypto module sends encrypted data to the server infrastructure via the GPRS modem (Tax Terminal).
- The server must send a message to the fiscal device before the validity of the Crypto Card expires.

2. Technical Requirements

- Have an API (Application Programming Interface) available for interaction with fiscal devices;
- The commands supported by the crypto module must be:
    - Registration of fiscal devices;
    - Changing data for fiscal devices on the server;
    - Deregistration of fiscal devices;
    - Task planning;
    - Generation of "Z" - reports;
    - Automatic transfer of totals of each fiscal coupon;
    - Obtaining details of each fiscal coupon;
- Accepts the message that will be displayed on the fiscal coupon;
- Accepts the message that will be displayed on the "Z"-report.
- TCP/IP socket communication with the server;
- RSA2048 key pair is used;
- AES symmetric encryption is used;
- Special controller for crypto modules, which uses protected profiles;
- EAL 5+ compatibility is used for crypto cards;
- Special cards for crypto medium encryption (crypto cards);
- Crypto medium can be changed.

Article 15 - Fiscal Terminal (TT) Requirements

1. ***Willingness to accept data***

TT is a device that enables two-way communication with:

- EFE/FS;
- Crypto Module (KM); and
- TAK Server.

The TT can be external or integrated.
The internal TT uses the functionalities and resources of the EFE/FS.
The external TT, in addition to other functionalities, must be able to communicate for seventy-two (72) hours in standby mode or four (4) hours of communication through sessions with the TAK server, every five (5) minutes, and must have a special place for placing the seal, which prevents access to its interior without removing it.
The external TT must meet other technical and functional characteristics according to internationally recognized CE standards for communication technology devices.

The purpose of the TT is to transfer and receive encrypted data and commands from the EFE/FS to the TAK information system and vice versa.

2. ***Data transmission***

TT must be equipped with a SIM card of a mobile telecommunications service operator; this card is dedicated only for data transmission.
TT must receive the information "Coupon for Coupon", X reports, Z reports, which are created by EFE/FS and prepared to be sent to the TAK server.
TT can also support more VPNs, which are provided by the mobile telecommunications operator.
TT must be able to send data to the TAK server at the time determined by the server.
It must receive and send data from the server towards the CSM and vice versa.
It must receive promotional messages from the TAK server with a maximum length of 250 characters in ASCII format, these messages are printed after the text "Fiscal Coupon".
It must be able to receive system messages from the TAK server, with a maximum length of 250 characters in ASCII format, these messages are printed in each Z report.

The transmission protocol will guarantee that the data is correctly received by the TAK server. In case of unsuccessful transmission, the system will attempt to resend the data as soon as a secure connection with the TAK server is established.

The EFE/FS must have optional remote Subscription capabilities without the need for intervention by an authorized Technician.

3. *Communication method*

Communication must be done through the GPRS system or other more advanced technology (3G, 4G, etc.), which must be based on the TCP/IP protocol.

Types of requests:

No.	**Request name**	**Description**
1	Send "Z" report to TAK server	Sending "Z" report data automatically from EFE/FS to the TAK server after the close of each day.
2	Send "X" report content	The request is initiated by the TAK server on-demand.
3	Send current fiscal coupon	The request is initiated by the TAK server on-demand.

4	Report with specific requests supported by server communication services (SC)	Fiscal coupon details
5	Verification of current EFE/FS status in real time	TAK will initiate the request for verification of the status (active/passive) of EFE/FS (ping).

The format and information that will be sent to the TAK server must be in accordance with the data of fiscal coupons and other fiscal documents described in this document and in other documents that will follow after the implementation of the Electronic Fiscal Equipment Management System.

CHAPTER III
TECHNICAL REQUIREMENTS FOR COMMON ELECTRONIC FISCAL DEVICES (EFE/FS)

Article 16 - Basic Technical Requirements

1. ***Fiscal memory type of the Electronic Fiscal Device***
The EFE must have non-volatile fiscal memory (memory that stores data without power supply), which is not erased.

2. ***Duration of active use of the Electronic Fiscal Device and the Tax Terminal***
The EFE and TT must be suitable for operation twenty-four (24) hours a day.

3. ***Real-time clock***
The EFE must have a real-time clock that can maintain accurate time for at least one thousand five hundred (1,500) hours without external power supply.

4. ***Data backup without power supply***
The EFE must provide data recorded in non-volatile memory (with backup battery) without external power supply for at least one thousand five hundred (1,500) hours.

5. ***Printing mechanism***
The EFE must have an alpha-numeric printing mechanism with coupon paper. When the paper runs out, the EFE must be blocked.

6. ***Electronic Fiscal Device Display***
The EFE must have an alphanumeric display for the seller and the consumer with at least sixteen (16) characters.

7. ***Tax Terminal Indicators***
The external TT must have indicators that show the user in which phase of operation the terminal is currently.

8. ***Memory capacity for items***
The EFE must have a memory for items with the capacity for:
• programming of at least five hundred (500) items with their names, prices and VAT rate;
• accumulative register for the quantity sold and the turnover of each item sold.

9. ***Operating conditions of the Electronic Fiscal Device***
The EFE must be able to operate at temperatures from zero degrees Celsius (0°C) to forty degrees Celsius (40°C). EFEs to be used in an open environment must be able to operate from minus fifteen degrees Celsius (-15°C) to plus forty-five degrees Celsius (45°C).

10. ***Fiscal memory mounting***
The fiscal memory must be mounted in a module separated by rigid non-transparent walls, which is permanently marked with its individual number. The fiscal memory module must be closed as a module and the module must be closed in the EFE box.
The casing, within the fiscal memory, also includes the component (casing) that records any removal or intervention in the EFE casing (housing).

11. ***Closing the Fiscal Electronic Device***
The EFE must provide a special seal (usually an adhesive or some other means) to protect the program memory from changes or deletion.

12. ***Provision of separate sets***
The EFE must provide separate sets of cumulative registers for each VAT rate for the coupon and for each VAT rate for the whole day (for the RFD time period).

13. ***Accumulation registers***
The cumulative registers for fiscal coupons must be at least eight (8) digits.

14. ***Construction of the Electronic Fiscal Device/Fiscal System***
The construction of the EFE/FS, TT, CSM and KK must be designed in such a way that there is a visible seal, which would guarantee that only authorized technicians can have access to the electrical components and modules. The seal is placed or removed only by the authorized technician of the Economic Operator.

15. ***Interface for connection to the PC***
The EFE and TT must have at least one interface for connection to the PC.

16. ***Accumulator Battery***
The EFE must incorporate a rechargeable battery so that it can operate for at least two hours even if the EFE is not connected to any power supply device (UPS). The battery incorporated in the EFE must enable the EFE to be supplied for seventy-two (72) hours in standby mode or four (4) hours of communication through sessions with the TAK server, every five (5) minutes.

17. ***Alternative supply voltage***
The EFE must be designed to operate on a single-phase alternative voltage of the public network with the following parameters:
• Voltage: 230V ± 10%
• Frequency: 50 ± 1 Hz
It is possible for the EFE to operate with a voltage of one phase (DC) less than 30V if it is equipped with an AC to DC voltage adapter connected to the public electricity network.
The implementation of the power supply must be in compliance with the European Regulation. In addition, the EFE must be designed from a safety point of view in full compliance with the current European Standards.

18. ***Technical Requirements***
The technical requirements for the EFE and TT for EMC, ESD, vibrations, temperature ranges, safety, etc. must be confirmed by a declaration issued by the manufacturer/importer. The laboratory may request additional documents and declarations.

2. ***Essential Features of Portable Fiscal Cash Registers***

- Portable AF must have:
- Appropriate dimensions;
- Rechargeable batteries;
- The ability to print at least ten thousand (10,000) lines without recharging the batteries and it is not mandatory to have a monitor for customers.

Article 17 - Fiscal System (FS) for points of sale in specific sectors – FUEL

1. Fiscal System for fuel retail outlets

The fiscal system for recording fuel retail sales (oil, gasoline, gas, etc.) can be a software or hardware solution, as long as it meets all the functional and technical characteristics specified in the document and is certified by the competent authority.

By dispenser (dispenser) we mean a pump or a fuel supply station in which several supply nozzles for different types of fuel are installed and which are controlled by an electronic circuit (head).

At a point of sale (supply station) one or several dispensers can be installed. The connection must be, an Electronic Dispenser Controller (EDC) for one or more dispensers. At the supply station all fuel dispensers, including those for LPG (liquid and gaseous fuels) must work under the Fiscal System regime. The data exchange between the dispenser and the FS is based on a communication-interface protocol, compatible with the specifications of the fuel dispenser. These must be able to communicate with the software on the PC or directly with the EFE to supply it with the necessary data for recording in the fiscal memory and for printing.

The use of other mechanisms that have a possible connection with the EDC in any way or another, except through the communication-interface protocol is strictly prohibited.

The fuel supply must be precisely linked to the registration of sales and must work under the mandatory rule "NO FISCAL COUPON, NO FUEL". The EDC connected to the electronic circuit of the dispenser ensures the transfer of information to the EFE about the sales made and commands the work processes of the dispenser.

The hardware FS is an independent (standalone) solution summarized in a box, which can be placed in the open environment, next to the dispenser. For this solution, the Economic Operator or manufacturer must declare that this system as a whole contains these characteristics:

- Ambient temperature - 30°C / +55°C;
- Humidity 5% - 95%;
- Must meet CE and ATEX standards;
- Must meet all physical criteria provided for the characteristics of conventional EFE, as well as any technical characteristics that are not specified in this section, the specifications of conventional EFE apply.

According to Administrative Instruction No. 01/2017 on the quality of liquid diesel fuels, dated 10.02.2017, liquid diesel fuels used for internal combustion engines, etc. are:

- Gasoline 95;
- Gasoline 98;
- Diesel;
- Heating oil;
- Gas oils;
- Kerosene.

These types of fuels, in the EFE/FS must be identified with six (6) digits and the information for the same must be stored in the fiscal memory.
Due to the existence of different subtypes for these liquid fuels, the Fiscal Systems to be applied must enable the use of up to twenty (20) different names for these subtypes of fuels. As these types of fuels

are sold, they will be presented on fiscal coupons, while as fuel figures and as daily totals they will be presented in the RFD, will be stored in the fiscal memory and will be transmitted to the TAK server. The transmission of data from the FS is done immediately after the daily fiscal closing.
The structure of the FS identification number for dispensers, 2D Barcode and fiscal logo, are the same as in the instructions defined earlier in this document.

2. ***Logical Operation of the Fiscal System***

The logical operation of the FS is different from ordinary EFEs since the FS must manage sales according to the product name, ID, price, quantity, value, VAT rate and dispenser ID. This information is reflected in the fiscal coupon, RFD, and transmitted to the TAK server.

3. ***Electronic Fiscal Device in the Fuel Fiscal System***

The EFE in the Fuel Fiscal System must enable the printing of a fiscal coupon for each ordinary fuel supply at a supply point. The supply point worker selects the nozzle according to the requested product and performs the supply. Once the supply is completed, the FS is waiting for the payment method to be selected and if the worker does not select the payment method, the FS executes the payment in the "Cash – cash" mode.".

4. ***Reports Menu***

The EFE used in Fiscal Systems must have a reports menu from which the following can be generated:

- RFD ("Z" – report);
- Reading of daily turnover ("X" – report).

5. ***Reading of Fiscal Memory***

- Summary of total turnover stored in Fiscal Memory;
- Summary report between two RFDs
- Summary report between two dates;
- Detailed report between two RFDs;
- Detailed report between two dates.

6. ***Reading of electronic journal (ECJ)***

- RFD copies;
- Coupon copy;
- Copy of all recorded operations.

7. ***The EFE in the Fuel Fiscal System must enable programming for***:

7.1. Products:

Products must have their name, unique number, price and VAT rate. In cases where there are fuel subtypes, then the name for each subtype is also specified.

7.2. Information such as:

a) Taxpayer name, Unique Identification Number / Fiscal Number, EFE serial number;
b) Date and time;
c) TT configuration.
The fiscalization procedure is the same as the fiscalization procedure of a regular EFE.

7.3. Changing VAT rates:

a) Programming the rate;
b) Reading rate changes.

VAT rates and their change is the same as the regular EFE procedure.

8. ***Fiscal System Capabilities***

The fuel FS must have the ability, without much software or hardware intervention, to be able at a later stage and when the relevant Authorities of the Republic of Kosovo believe it is necessary, to monitor, store, manage and transmit to TAK also data on tanks such as volume, temperature, etc.
The FS must enable:

8.1. Configuration of the Dispenser - EDC connection type, which serves to enter technical parameters directly from the EFE or through an interface through which a direct connection to the EDC is made.

8.2. Activation of the EDC passive port, to be connected to any software program that will serve to automate the point of sale. The drivers for connecting the application to the EDC are of the fiscal type and the Economic Operator is responsible for them and for the applications that will be connected in the future.

8.3. Software program that operates on a PC. If the software program that processes the data operates on a personal computer, then all necessary measures must be taken to control and verify the Software (software ID, version number, checksum or equivalent) in order to maintain the integrity of the data.

9. ***Connection of fuel dispensers to the Electronic Fiscal Device***

9.1. Data on the sale of fuel must be automatically stored in the EFE, as well as in the ECJ. The circulated values are automatically certified with the issuance of the fiscal coupon by the EFE.

9.2. The fiscal coupon must contain:

- The seller's identification data;
- The name of the item;
- The quantity sold; in this format (xxxx,yyy LT; where xxxx=full litters; yyy=value in millilitres after the decimal point; LT=litters);
- The value of the fuel sold (according to the price table);
- Value sold according to tax rate;
- Value of tax rate;
- Percentage decrease (%)
- Percentage increase (%)
- Dispenser number;
- Serial number of EFE;
- Date, time of sale;
- Serial number of fiscal memory;
- Fiscal coupon counter;
- 2D Barcode
- Fiscal logo.
- Free text.

10. ***Sales during testing and calibration of dispensers***

During the testing of the functioning of dispensers installed or being installed and during their calibration procedure, at supply points by the competent authority, the delivery of liquid fuel is allowed for which a “fiscal coupon with the inscription TEST” must be issued by the installed EFE/FS.

11. ***Operation of the supply point where the Fiscal System is installed***

The operation of the supply point where the FS is installed is carried out under the control of one or more control devices (EDC), connected according to the dispenser-EDC-EFE scheme, as a FS as a whole.

The dispenser must work only in automatic mode, under the control of the FS. EDC communicates with the dispenser according to the specified protocol, keeps the progressive counter of the dispenser memorized by refreshing it after each sale. EDC, as a whole whether it is a device or a series of devices, is sealed under the same conditions as the EFE by the authorized technician.

12. ***Communication interruptions***

EFE in the Fiscal System through EDC must identify events for communication interruptions between EFE and EDC or EDC and any dispenser. The number of these two possible cases of eventual communication interruptions within a day must be printed in the RFD and sent to the TAKserver.
FS must identify these disconnections of connections as "COMMUNICATION INTERRUPTIONS", and count them, so that at the daily closing they will be printed in the RFD and sent to the TAKserver.
In cases of communication interruption, the following must be done:

- In cases where the connection between EDC and the electronic circuit of the dispenser is disconnected, in the case of more dispensers at a supply point, then only the defective dispenser must be blocked.
- In the case of communication interruption between EDC and EFE, then EFE will be blocked and as a result the dispensers connected to EDC will also be blocked. Also, even when there is a EFE defect, the dispensers must be blocked.
- For supply points that are equipped with only one dispenser, upon the occurrence of any of the above-mentioned cases, both the EFE and the dispenser must be blocked.

13. ***The dispenser is not allowed to work in manual mode***

The FS must not allow the dispenser to work in manual mode.

14. ***Fiscal System Repair***

The FS repair must be carried out within forty-eight (48) hours by the Economic Operator with whom the taxpayer has a maintenance contract.

15. ***Description of the defect***

The Economic Operator technician, in the special accompanying booklet, must record all the defect data, and must register the same in the TAK system.

16. ***In case of paper run out or open printer head***

In case of paper run out or in cases where the EFE printer head is open, the dispenser must not function.
Fuel supply points equipped with FS, in order to ensure continuity and smooth operation of the process during eventual cases of FS operation interruptions, resulting in any possible defect, must also be equipped with a EFE with technical and functional characteristics identical to the primary EFE.

17. ***Technical parameters of the Fiscal Memory***

The Fiscal Memory must have the same technical parameters described in Administrative Instruction (MF) No. 01/2026 and according to the descriptions in this document.

The information that must be stored in the Fiscal Memory is:

- RFD number;
- Date (according to format: date, month and year);
- EFE serial number;
- Fiscal Memory serial number;

- Fiscal Number / Unique Identification Number;
- VAT Number (if any);
- Daily sales turnover;
- Daily tax value for each VAT rate;
- Number of fiscal coupons issued;
- VAT rates and their changes;
- Decimal point in the price of the item and in its register;
- Fuel number;
- Quantity sold per day;
- Daily turnover value;
- VAT rate for fuels;
- Date, hour and minutes of fiscalization of the system;
- Payment method (cash, card, etc.).

All retail fuel sales points must be equipped with dispensers that work automatically, under the control of the FS. The mechanical dispenser must be replaced with a dispenser that has the ability to connect to the EFE defined in this document.

Examples of fiscal coupons for retail sales of fuels are presented in Appendix "C" of this document.

Article 18 - Tax Terminal Requirements, modified for Fiscal Systems for retail fuel sales

The TT operation process for FS is the same as the TT description set out in Article 16 of this document.

Report transmitted to the TAK server
In a special mode, the EFE will provide the possibility to send a periodic and on-demand report to the TAK server through TT. The requirements for this periodic report are described in this document. Successful transmission of this report will end with the automatic printing of its summary, which will contain:

- Document header;
- Report name;
- Period start date;
- Period end date;
- Fiscalization date, hour and minutes;
- First part of the report:
    - • Calculation of RFD in the period;
    - • Total turnover amount including VAT for the period;
    - • Total tax amount (VAT) to be paid for the period;
    - • Calculation of fiscal coupons in the period;
    - • Circulation according to VAT rates amount;
    - • Tax (VAT) to be paid according to VAT rates amount;
- Quantity by fuel type;
- Amount by fuel type;
- Quantity by dispensers;
- Amount by dispensers;
- Daily Error Report, resetting the EFE Memory;
- Number of RAM resets;

- Communication interruptions between EFE and EDC, as well as interruptions between EDC and any dispenser;
- Payment method (cash, card, etc.)
- Last counter status by dispenser;
- Text "Transmission OK" if the transmission was successful or text "Transmission not OK" if the transmission was not successful;
- End of the document.

An example of the report printed by EFE after the successful transmission of the periodic report to the TAK server through TT is provided in Appendix "C" of this document.

Article 19 - Specific Requirements for Fiscal Printers

1. Fiscal Printer Operation

The PF must work on a PC system, which performs functions that are similar to the functions of a conventional EFE. For this reason, the PF must meet additional requirements, as follows:

- Enable reading data from the Fiscal Memory as an independent device (standalone) without being connected to a PC.
- Be able to control the integrated or external display for consumers;
- Execute system commands transferred from the PC, which will require functions that are similar to the functions supported by a conventional EFE where commands are entered through the keyboard.

2. ***Unique Fiscal Printer***

A PF can be unique with the ability to print two types, such as: fiscal coupons and RFD, while maintaining the technical specifications of the fiscal coupon for derivatives and the fiscal coupon for other goods and services, as well as transmitting data to ATK, separately according to the functional technical specifications.

3. ***Fiscal printer testing***

The PF testing is done on a system with a PC and software that allows all functional requirements to be checked.

Article 20 - Fiscal System (FS) for specific sectors – TAXI

1. Fiscal System for passenger transport services - TAXI

The FS for recording the circulation of passenger transport services - TAXI must be a solution that meets all the functional and technical characteristics (as an integrated or separate whole) specified in this document and be certified by the competent and authorized Institutes, Laboratories or Institutions for testing and verifying the fulfillment of the technical and functional requirements specified in the special requirements.

In each transport vehicle - TAXI, an FS must be installed. The connection must be, a "TAXIMETER" with a EFE. All vehicles providing TAXI services must work under the Fiscal System regime. The exchange of data between the "TAXIMETER" and the EFE is based on a communication protocol, compatible with the specifications of the "TAXIMETER". The "TAXIMETER" must communicate directly with the EFE to supply it with the necessary data for registration in the Fiscal Memory and for printing.

The provision of TAXI services must be strictly linked to the registration of services and must work under the mandatory rule "NO FISCAL COUPON, NO SERVICE".

The "TAXIMETER" connected to the electrical circuit ensures the tranFSer of information to the EFE for the services provided.

For this solution, the Economic Operator or the manufacturer must declare that this system as a whole contains these characteristics:

- Ambient temperature - 30°C / +80°C;
- Humidity 5% - 95%;
- Must meet CE standards;
- Must meet all physical criteria provided for the characteristics of the common EFE, as well as any technical characteristics that are not specified in this section, the specifications of the common EFE apply.

Due to the existence of different tariffs for TAXI services, the FS that will be applied must enable the use of all TAXI services, which will be presented in fiscal coupons as the service is performed, while as types of services and as daily totals they will be presented in the RFD, stored in the Fiscal Memory and transmitted to the TAK server. The transmission of data from the FS is done through periodic reports (daily and on-demand) "coupon for coupon", to the TAK server.
The structure of the EFE identification number for TAXI, 2D Barcode and fiscal logo, are the same as in the instructions defined earlier in this document.

2. ***Logical operation of the Electronic Fiscal Device of the Fiscal System***
The logical operation of the EFE of the FS is different from the usual EFE, since the FS must manage services according to the type of service, ID, price, kilometers, value, VAT rate and TAXI ID.

3. ***Electronic Fiscal Device in the Fiscal System for TAXI***
EFE in the FS for TAXI services must enable printing of the fiscal coupon for the services provided. The TAXI driver selects the type of service according to the customer's request, as soon as he performs the service, the FS is waiting for the payment method to be selected. If the driver does not print the fiscal coupon, the service remains open.

4. ***Report Menu***
The EFE used in the FS for TAXI must have a report menu, from which the following can be generated:

- RFD ("Z" – report);
- Reading the daily turnover ("X" – report).

5. ***Reading the Fiscal Memory***

- Summary of the total turnover stored in the Fiscal Memory;
- Summary report between two RFDs;
- Summary report between two dates;
- Detailed report between two RFDs;
- Detailed report between two dates.

6. ***Reading the electronic journal (ECJ)***

- Copy of RFD;
- Copy of the coupon;
- Copy of all recorded operations.

7. ***The Electronic Fiscal Device in the Fiscal System of TAXI services must enable programming for:***

7.1. Services

The service must have the name, number, price and VAT rate. In cases where there are subtypes of service, then the name for each subtype is also specified.

7.2. Information, such as:

a) Name of the taxpayer, Fiscal Number/Unique Identification Number, Serial Number of the EFE;

b) Date and time;

c) TT configuration.

The fiscalization procedure is the same as the fiscalization procedure of the ordinary EFE.

7.3. Changing VAT rates:

a) Programming the rate;

b) Reading rate changes.

VAT rates and their change is the same as the procedure for a regular EFE.

8. ***Fiscal System Capabilities***

FS for TAXI services must enable:

8.1. Configuring the TAXIMETER-EFE connection type, which serves to enter technical parameters directly from the EFE or through an interface through which a direct connection to the TAXIMETER is made.

8.2. To activate the EFE passive port if the EFE type supports it, so that it can be connected to a software program that will serve to automate services. The drivers for connecting the application to the EFE are of the fiscal type and the Economic Operator is responsible for them and for applications that will be connected in the future.

9. ***Connecting the TAXIMETER to Electronic Fiscal Equipment***

9.1. Data on the provision of the service - Must be automatically stored in the EFE, as well as in the electronic journal (ECJ).

9.2. The fiscal coupon must contain:

- Identification data of the service provider;
- Identification data for the TAXI driver;
- Type of service;
- Departure time;
- Arrival time;
- Duration;
- Kilometres travelled;
- Value of the service provided;
- Value excluding VAT;
- Value of VAT;
- Value of the tax rate;
- Percentage decrease (%)
- Percentage increase (%)
- Serial number of the EFE;

- Date, time of service;
- Fiscal coupon counter;
- Fiscal coupon number
- Payment method;
- 2D Barcode;
- Fiscal logo.

10. ***Operation of the Fiscal System where it is installed***
The TAXIMETER must work only in automatic mode, under the control of the FS. The TAXIMETER communicates with the EFE according to the specified protocol, the EFE keeps the TAXIMETER's progressive counter memorized, updating it after each service provided.

11. Communication interruptions
The EFE in the FS must identify events for communication interruptions between the EFE and the TAXIMETER. The number of these possible cases of eventual communication interruptions within a day must be printed in the RFD and sent to the TAKserver.
The FS must identify these connection interruptions as "COMMUNICATION INTERRUPTIONS", and count them, so that at the daily closing they will be printed in the RFD and sent to the TAKserver.
In cases of communication interruption, the following must be done:

- In cases where the connection between the EFE and the electrical circuit of the electricity supply is disconnected, then the EFE records it as an interruption of the electricity supply.

- In cases where the connection between the TAXIMETER and the EFE is disconnected, then the EFE records it as an interruption of communication.

12. ***The vehicle is not allowed to work as a TAXI if the Fiscal System is out of order***.
In cases where the FS is out of order, the vehicle is not allowed to provide services related to the transport of passengers - TAXI.

13. **Repair of the Fiscal System**
The repair of the FS must be carried out within forty-eight (48) hours by the Economic Operator with whom the taxpayer has a maintenance contract.

14. ***Description of the defect***
The Economic Operator's technician, in the special accompanying booklet, must record all the defect data, and must also record the same in the TAK system.

15. ***In case of paper running out or open printer head***
In case of paper running out or in cases where the EFE printer head is open, the FS must not function.

16. ***Technical parameters of the Fiscal Memory***
The Fiscal Memory must have the same technical parameters described in the Administrative Instruction (MF) No. 01/2026 and according to the descriptions in this document.

The information that must be stored in the Fiscal Memory is:
- RFD Number;
- Date (according to the format: date, month and year);
- EFE Serial Number;
- Fiscal Memory Serial Number;
- Fiscal Number / Unique Identification Number;

- VAT number (if any);
- Daily sales turnover;
- Daily tax value for each VAT rate;
- Number of fiscal coupons issued;
- VAT rates and their changes;
- Decimal point in the price of the item and in its register;
- Service type number;
- Number of daily services;
- Daily turnover value;
- VAT rate for services;
- Date, hour and minutes of fiscalization of the system;
- Payment method (cash, card, etc.).

All vehicles that have a TAXIMETER, but that do not support connection to the EFE, must be replaced with a TAXIMETER that has the ability to connect to the EFE or Fiscal System as an integrated whole, defined according to this document.

Examples of fiscal coupons for the provision of passenger transport services - TAXI, are presented in Appendix "D" of this document.

Article 21 - Tax Terminal Requirements, Modified for Fiscal Systems for the Provision of Passenger Transport Services – TAXI

The TT operation process for FS TAXI is the same as the TT description set out in Article 16 of this document.

The report transmitted to the TAK server

In a special mode, the EFE will provide the possibility to send a periodic and on-demand report via TT to the TAK server. This periodic report must be based on the data stored in the Fiscal Memory, as well as other information from the ECJ.

The requirements for this periodic report are described in this document. The succesFSul transmission of this report will end with the automatic printing of its summary, which will contain:

- Document header;
- Report name;
- Period start date;
- Period end date;
- Fiscalization date, hour and minutes;
- First part of the report:
    - Calculation of RFD in the period;
    - Total amount of turnover including VAT for the period;
    - Total amount of tax (VAT) to be paid for the period;
    - Calculation of fiscal coupons in the period;
    - Turnover according to VAT rates amount;
    - Tax (VAT) to be paid according to VAT rates amount;
- Number of service types;
- Amount by service type;
- Number by service fees;
- Amount by service fees;
- Daily Error Report, resetting of the EFE Memory;
- Number of RAM resets;

- Communication interruptions between the EFE and the electrical circuit of the power supply, as well as interruptions between the TAXIMETER and the EFE;
- Payment method (cash, card, etc.)
- Last counter status by daily services;
- Text “Transmission OK” if the transmission was successfully completed or text “Transmission not OK” if the transmission was not successfully completed;
- End of the document.

An example of the report printed by the EFE after the successful transmission of the periodic report to the TAK server through TT is provided in Annex “D” of this document.

PART II

CHAPTER IV
ELECTRONIC FISCAL SOFTWARES (EFS)

Article 22 - EFS Management

The Fiscal Cash Division (FCD) is responsible for managing the EFS.

Article 23 - Persons obliged to install Electronic Fiscal Software

The persons required to install EFS are as follows:

- ***Taxpayers*** defined in Article 5 of Administrative Instruction (MF) No. 01/2026, who exercise economic activity, in retail sales, in the provision of services in places or units open to the public, or any other similar activity, including public enterprises and socially owned enterprises, are obliged to use the EFS and other mandatory devices for the registration and verification of the supply of goods and/or services; and
- ***Public institutions***, which for the services provided accept CASH payments, except in cases where they are exempted according to Administrative Instruction (MF) No. 01/2026.

Article 24 - Electronic Fiscal Software

The Electronic Fiscal Software (EFS) enables the storage and recording of each transaction in an electronic register, electronically signed for each fiscal coupon, using the private key for signing fiscal coupons and a secure connection with the TAK Information System for data exchange.

Other functions of the EFS are defined in Article 32 of the Administrative Instruction (MF) No. 01/2026.

FUNCTIONAL AND TECHNICAL REQUIREMENTS FOR ELECTRONIC FISCAL SOFTWARE

Article 25 - Functional Requirements for Electronic Fiscal Software (EFS)

Functional requirements define the functions that the EFS must have to enable accurate recording and reporting of fiscal transactions. Some of the functional requirements are:

- ***EFS Installation***: The EFS must be able to be installed on various devices, including desktop computers, laptops, tablets and mobile phones, etc., with interfaces adapted to each respective device.

- ***EFS Repair***: EFS repair must be carried out by the taxpayer within a maximum period of forty-eight (48) hours.
- ***Transaction Recording***: The EFS must enable the recording of each transaction performed, including the information required for fiscal coupons;
- ***Fiscal Coupon Issuance***: The EFS must enable the creation and sending of fiscal coupons that are linked to the TAK Information System for real-time reporting;
- ***Fiscal Reporting***: The EFS must provide the ability to create reports for control and verification for TAK needs;
- ***Data verification and security***: The EFS should provide mechanisms for verifying the accuracy of data and protecting data from external interference or manipulation, applying minimum security measures;
- ***Configuration of measurement units and categories***: The EFS should enable the configuration of measurement units and categories, in accordance with the type of item or service. The list/table of measurement units is included at the end of the document.

All Electronic Fiscal Software (EFS) used for recording and storing fiscal data must contain:

1. ***Automation and compliance with tax legislation*** - The EFS must automatically record and report sales transactions to taxpayers, in full compliance with the tax legislation in force in the Republic of Kosovo.

2. ***Fiscal coupon generation and real-time reporting*** - The EFS must generate a fiscal coupon for each sales transaction, which contains all mandatory elements, and report the data in real time to the TAK Information System.

3. ***Data structuring and digital signature*** - The EFS must adapt the structure of the coupon data, sign the coupon data with the private key and use the communication protocols described in the document published on the TAK website "EFS Implementation Specifications".

4. ***Currency used in the EFS and price format*** - The EFS must operate in the price regime expressed in euros (€) per unit, with a numerical format that includes whole numbers and four decimal places (e.g., 0.0000), while the total value includes the whole number and two decimal places (e.g., 0.00).

5. ***Local storage and traceability*** - the software must securely store all data of fiscal coupons issued and guarantee full traceability for each operation.

   5.1. ***Organization and recording of transactions***

   a. ***Recording of each sales transaction in a unique and unchangeable way***:
   - Each sale has a unique transaction ID, date/time, product name, quantity, price, discounts and the person (operator) who made the sale.
   - Storing transactions immutably (write-once, read-manyw).

   b. ***Recording errors and corrections***:
   - If a sale is cancelled, a new transaction of type "cancellation" is created related to the original transaction.
   - Deleting transactions is prohibited – only auditable corrections.

5.2. ***Transaction Recording and Traceability***

- Each vendor transaction is recorded with a unique ID, date/time, operator, product name, quantity and price.
- Transactions cannot be deleted, but only canceled or corrected with a new recording.
- The system stores a complete history of changes for each transaction and item.

5.3. ***Auditing and Monitoring***

- The system stores audit logs for all user actions: login, sale, cancellation, configuration change.
- Logs are stored according to a legal deadline that applies to accounting records according to the Law on the Administration of Tax Procedures and are protected by encryption and integrity control.

6. ***Communication interruption*** - In the event of communication interruption with the TAK Information System, the EFS must enable the generation of fiscal coupons and store them securely within the EFS. Once communication with the TAK Information System is restored, this information must be automatically transmitted to the TAK Information System.

7. ***Testing and preliminary approval of the EFS*** - The use of a EFS is permitted only after successful technical and functional testing by the relevant TAK commission. EFSs that do not meet the standards set by TAK cannot be certified and cannot be used at points of sale.

8. ***Updates and compliance with technical and legal changes*** - The developer or provider of the EFS is obliged to update the software whenever there are changes in tax legislation or technical specifications, respecting the deadlines set by TAK. Testing and certification of the EFS update is carried out according to the requirements set by the TAK commission.

9. **Return of an item** – EFS must enable the return of items by generating a fiscal return coupon, which must refer to the original coupon to ensure its traceability.

10. **Exchange of an item** – In cases of exchange of an item, EFS must support this function through a combined return and new sale process.
    Initially, the exchange must be recorded as a return of an item/s by generating a fiscal return coupon.
    Then, the new item is recorded as a new sale, for which a regular fiscal coupon is generated.

11. **Cancellation of a fiscal coupon** – EFS must enable the cancellation of a regular fiscal coupon if an error has been issued after the transmission/printing of that fiscal coupon. EFS must generate a "Cancellation Coupon" coupon in which the reason for the cancellation must be described and that coupon must be directly linked to the original regular fiscal coupon for traceability.

12. ***Tax rates*** – EFS must support at least four different tax rates.

- Each rate is marked with the letters “A”, “C”, “D”, “E” – where “A” means the tax rate exempt from VAT, while the other tax rates are described in the document published on the TAKwebsite “EFS Implementation Specifics”.
- EFS must not allow negative values for VAT turnover.

13. ***EFS Reporting Method*** - EFS must automatically report every fiscal transaction in a structured and secure manner to the TAK Information System in real time and according to the defined format.

14. ***Multilingual functionality*** - EFS must provide user interfaces and functions and support multilingualism, according to the legislation in force on the use of official languages in the Republic of Kosovo. The letters of the alphabet must be Latin letters, including special characters of the official languages.

15. ***Interruption of the electronic (internet) connection and temporary storage of data in EFS*** - In the event of interruption of the electronic (internet) connection, EFS must store data securely locally and as soon as the connection is restored, EFS must automatically transmit all stored data, as well as record a detailed technical event.

16. ***Failure of the device for the implementation of fiscalization*** - EFS must enable the recording of all fiscal coupons issued by the special tax block in cases of complete failure of the device/EFS.

17. ***Data structure and integrity control in EFS***- EFS must be built to transmit fiscal data in real time to the Information System of the Tax Administration of Kosovo (ATK), through a secure connection with the HTTPS protocol, to guarantee the security and integrity of the data.

18. ***Printing of the fiscal coupon*** - Each EFS must enable the printing of the fiscal coupon or it can be sent electronically for specific supplies (electronic supplies). EFS must also enable the “Print Preview” form of the fiscal coupon, so that consumers can scan the QR-code of that fiscal coupon, which is not required to be printed.

    The fiscal coupon is issued in an original copy and stored in the database/electronic records.

    If necessary, a copy of the original coupon can be printed at any time, which must be clearly marked “COPY OF COUPON”.
    The fiscal coupon printed or sent in electronic form must be legible and must contain the following data:
    - Unique Identification Number/Fiscal Number of the Taxpayer;
    - VAT number, if the taxpayer is registered for VAT;
    - Name of the taxpayer;
    - Address of the unit where the fiscal coupon is issued;
    - Number of the unit from which the fiscal coupon is issued (Number generated by the Taxpayer Registration Agency);
    - Name of the person (worker) and his/her identification number;
    - At least one line for each item:
        • quantity;
        • price per unit;
        • the name of the item or service (if the item is the same, it should be grouped with one line, so the same item should not appear in multiple lines on the fiscal coupon);
        • the value of the supply quantity;
        • the relevant VAT rate marked with a specific letter for each item supplied;

- The percentage (or value) of the discount and its amount with a minus sign, or the percentage (value) of the increase, if any for the item;
- The amount of the subtotal, the percentage (or value) of the discount on it and its amount with a minus sign, the percentage (or value) of the excess, if any;
- The total amount for payment;
- The amount paid in different payment methods, such as: cash (CASH), credit card, debit card, bank account, reward coupon (coupon), check, SMS, etc.;
- The amount of tax according to the different active tax rates;
- Total amount without tax;
- Date, hour and minutes of issuance;
- EFS identification number ([Unit Number] – [UIN] – [PosId], e.g. 5130484-812345678-11);
- Ordinal (chronological) number of the issued coupon;
- Daily number of the fiscal coupon;
- QR Code;
- Unique Identification Number of the Fiscal Coupon (Verification No) which is described in the document published on the TAK website "EFS Implementation Specifications";
- Logo – RKS;
- Type of coupon: regular, cancellation, return of goods, etc.;
- Text "e – coupon" (for coupons issued by EFS) and
- Free text, etc.

Examples of fiscal coupons are given in the appendices at the end of this document.

Article 26 - Technical Requirements for the Implementation of Electronic Fiscal Software (EFS)

1. ***Technical Requirements***

The technical requirements define the minimum infrastructure and technology specifications that must be used to implement the Electronic Fiscal Software (EFS). These include:

- Integration with the TAK System: The EFS must be fully integrated with the TAK infrastructure, for the transmission of fiscal transactions in real time. This integration is enabled through standardized and documented APIs by ATK;
- Security and Encryption: All transaction data and communications between the EFS and TAK must be transmitted through security protocols such as HTTPS with SSL/TLS, to guarantee confidentiality, integrity and authentication of data;
- Compatibility for Different Devices: The EFS must be suitable for use on different devices, including desktop computers, laptops, tablets and mobile phones, etc., with interfaces adapted to each device;
- EFS at points of sale (POS): EFS must allow interconnection and operation with point of sale (POS) devices that record transactions in real time and are synchronized with the TAK Information System.

2. ***Connection Security (Data Communication)***

- Use of **HTTPS** for data encryption during transmission;
- Fiscal coupon data that is transmitted is signed with the private key;

3. ***Data Format***

- Data must be transmitted in a structured format, as described in the document published on the TAK website “EFS Implementation Specifications”.;
- Data must be encrypted before transmission;

4. ***Data Storage***

- EFS must store transaction data in a protected manner, ensuring that no fiscalized information is lost in the event of a defect or unexpected interruption of operation;
- In case of internet failure, the device saves the data and sends it automatically as soon as the connection is restored;
- All data that is stored locally for various reasons must be stored encrypted using advanced encryption standards.;
- Access to this data must be enabled only upon request of TAK or any other state authority.

5. ***Real Time and Failure Signalling***

- Before the fiscal coupon is printed, the EFS must transmit the fiscal coupon data to the TAK system.
- For each transaction not transmitted or rejected by the TAK information system, the software must display an error message to the user and make automatic attempts to re-transmit.
- 24/7 Operation
- EFS must be functional and accessible to the taxpayer at all times (24 hours a day, 7 days a week), through local or cloud infrastructure, to ensure continuity in the recording and transmission of fiscal data.
- Time synchronization
- EFS must use real time, synchronized with the time zone of the TAK Information System, to accurately record the date, hour, minute and second of each fiscal transaction.
- Fiscal coupon generation
- EFS must be able to generate a fiscal coupon in electronic format and prepared for printing, including all mandatory elements according to the specified requirements.

6. ***Verification and Control***

TAK has the right to verify and control any EFS installation, carried out by any EFS developer or maintainer, to ensure that it works in accordance with the technical and functional specifications, as well as other necessary elements.

EFS must maintain detailed records of:

- Traces of sent and failed transactions (date, time, minutes, seconds, fiscal coupon number, total amount of fiscal coupon);
- Errors;
- Interventions or modifications to EFS.

7. ***Export of Audit Logs***

• It must be possible to export logs in one of the standard formats such as: CSV, PDF or other format suitable for external control by TAK or any other state authority;
• They must be stored according to the legislation in force;

8. ***Source code and data protection***
   After the EFS certification, the source code and fiscal data must be protected against unauthorized interference.

9. **Control against unauthorized interference**
   The EFS must contain security mechanisms that prevent changes to the EFS by unauthorized persons, including digital signature, storage and transmission.

10. ***Unique fiscal coupon identification number (FCUIN)***
    The unique fiscal coupon identification number must contain alphanumeric characters in sequence as a single unique value, without divisions, dashes or special characters.

    The FCUIN must have a maximum length of 16 characters.

11. ***Interface for communication with other systems***
    EFS must enable interconnection or integration with accounting, sales management or supplier systems.

12. **Operation in offline mode**
    EFS must operate even in the absence of connection to ATK, storing data temporarily and chronologically, and transmitting them as soon as the connection is restored. During this period of time, the user **must have a visual notification that it is operating offline**.
    Each coupon generated in offline mode must have the inscription "OFFLINE" and the chronology of the fiscal coupon number must be respected.

13. **Supported printing formats**
    - Thermal paper with a width of 58 mm to 100 mm according to industry standards;
    - The print must contain the full data of the fiscal coupon and be readable;
    - The text must be clear, with sufficient contrast and stable quality over time, in order to guarantee its preservation and traceability.

14. **EFS testing before starting use**
    - There is a development or testing environment, which will be used for EFS Providers, for the integration of the software into the TAK platform.
    - While connection to the real environment will be allowed after the EFS Certification by TAK and cannot be used for testing.

15. **EFS Certification**:
    After certification, any natural or legal person who develops or maintains The EFS is provided with the Unique EFS Code, which is stored in the Electronic Fiscal Software registry managed by TAK. This code, together with the UIN/NF of the software developer, must be integrated into the software solution, so that the fiscal system can identify the developer and the software solution used during each delivery of fiscal coupons in the fiscalization procedure.

Article 27 - Sales through self-service devices (vending machines) via EFS

1. ***Self-service device (vending machines)*** is considered any automated device that realizes turnover from the sale of goods and/or services, where during the supply of goods and/or services and the collection of payments an individual does not participate in the capacity of the seller.

2. ***Real-time fiscalization*** - The EFS integrated in the self-service device/vending machines must report real-time sales data of the transaction to the TAK Information System through an internet connection.

3. ***Identification and location*** - The taxpayer must declare the exact address of the vending machine or the nearest geographical location and describe in detail the exact location/location within the relevant space e.g., Shopping centre, gaming place etc.

4. ***Integration of EFS in self-service devices*** - Any vending machine/self-service device such as car washes, equipment for electrical supply of car filling, fuel supply, automatic machines for drinks, food, children's game machines, etc. must be able to:
   - integrate EFS,
   - generate and print fiscal coupons for each supply of goods and or services/transaction and
   - transmit data in real time to the TAK Information System.

5. ***Management of communication interruptions*** - If a temporary interruption of communication occurs between the EFS installed on the self-service device (vending machines) and the TAK Information System, the taxpayer is obliged to save sales data and within 48 hours eliminate the communication problem.

Article 28 - Fiscal Coupon and QR Code generation

1. ***The fiscal coupon*** is a document generated by the EFS, which records the supply of all goods and/or services made to the final consumer.
   However, if electronic services are provided or the supply of goods and/or services is contracted and charged through a mobile application, when the purchase is made remotely, when the supply is made through an electronic platform or online store – in these cases, the fiscal coupon may not be printed on paper, so instead the seller may send the fiscal coupon to the buyer in electronic form.
2. ***Cashless payment*** - In case the payment is made without cash (e.g., by bank card or any other form of electronic payment), the EFS must enable the fiscal coupon to be printed or sent in electronic form if the buyer has consented to receive it electronically.

3. ***Coupon Content and QR Code*** - Each fiscal coupon generated by EFS, in addition to other required information, must also contain the QR Code as a mandatory element of the fiscal coupon, both in the case when the fiscal coupon is fiscalized - successfully reported to TAK, and in cases when the fiscal coupon cannot be fiscalized, such as: due to temporary lack of internet, availability of the fiscal service server, etc.

4. ***QR Code Structure*** - The QR Code contains fiscal coupon data, as well as the digital signature through the private key. For each fiscal coupon generated, EFS must automatically create an alphanumeric string of the QR code for a fiscal coupon, e.g.**:**

CAEQARjSCSABMIGUybcGOJëOQgYKAUMQëgNCCAoBRBD
AAhgaQgkKAUUQmggYvQFI1ëE=|MEUCIQCCl4SId/Jsx12ncygo
bURIZMt4K93Tug+jBmdesjG3oëIgPPJNi6Ahu8Hb04oVqiFR2lbO
qPAZim+zvpED4dLcBNY=

The technical content of the QR code is defined in the technical specifications described in the document published on the TAK website "EFS Implementation Specifications".

5. ***Verification of the fiscal coupon*** - Each fiscal coupon issued must be verifiable through the QR Code, through a special application developed by TAK from a smart device or from any other electronic device that supports the special application for scanning the QR Code.

6. ***Coupons issued in offline mode*** - In cases where the fiscal coupon is printed by the EFS, which is in offline mode, then the fiscal coupon must also contain the note with a text "OFFLINE" to distinguish as a coupon that transactions that have not yet been fiscalized in real time.

Article 29 - EFS at fuel retail outlets

1. Use of EFS in fuel retailing

EFS must be used for the registration and fiscalization of fuel circulation at retail points of sale and must meet all technical and functional requirements determined by TAK and be certified by the TAK Commission.

2. ***Types and subtypes of fuels***

Types and subtypes of fuels are determined by the Administrative Instruction on the quality of liquid diesel fuels, of the relevant Ministry, which are used for internal combustion engines.
Due to the existence of different subtypes for these liquid fuels, as these types/subtypes of fuels are sold, EFS must reflect them in the fiscal coupon.

3. ***Communication with distribution equipment / Dispenser***

EFS must communicate directly with the Dispenser through protocols and interconnection standards that are compatible with the technical specifications of fuel dispensers. The use of other mechanisms is permitted if any additional physical equipment is required to be installed by the EFS developer, where it is required to be documented by the EFS developer/provider that data security is not compromised, and to be approved by the certification committee.

4. ***Operating regime***

The sale of fuel to the final consumer must be linked to the registration of the fiscal transaction through EFS and the rule "No fiscal coupon, no fuel" must be applied.

EFS accepts sales data for each transaction by registering: product name, price, quantity, value, VAT rate, dispenser ID, etc. These data are reflected in the fiscal coupon and transmitted in real time to the TAK Information System.
EFS must enable both the placement of various items for sale and the placement of a transaction from unpaid filling, from a designated dispenser.

5. ***Content of the EFS fiscal coupon for fuel***
The fiscal coupon for fuel sales must include all the elements provided for in Administrative Instruction MF No. 01/2026, Article 7, including the Dispenser Number. In cases of testing by the relevant institutions, the coupon must contain the description "Test".
If the EFS operates offline, the coupon must have the description “OFFLINE”
Examples of fiscal coupons for retail fuel sales are presented in Appendix “G” of this document.

6. ***Printing the coupon and payment method***
The EFS at the fuel supply/sale point must enable printing of the fiscal coupon for each fuel supply. Once the supply is completed, the EFS waits for the payment method to be selected and if the employee does not select the payment method, the EFS executes the payment in the “Cash” mode.”.

EFS should enable the printing of a single fiscal coupon when there is a supply of fuel and other products purchased at fuel points of sale.

7. ***Communication interruptions between the EFS and the Dispenser***
The EFS must identify and record any communication interruption with the Dispenser. These interruptions are recorded in the local EFS registers.
The format of the interruption recording must include at least:
- time of interruption (date, hour, min, sec.);
- time of recovery (date, hour, min, sec.) and
- the status of the counters by fuel type for the Dispenser, before the communication interruption and the status of the counters after the communication is restored.

8. **Blocking of the sale in case of defect**
In case the connection between the EFS and the communication connection of the dispenser is broken, only the defective dispenser must be blocked.

9. **Limitation of the manual mode**
The dispensers must not operate in manual mode and must be blocked automatically in case of interruption of the EFS operation.

Article 30 - Electronic Fiscal System for specific sectors – TAXI

1***. EFS for passenger transport services - TAXI***

EFS for recording the circulation of passenger transport services by TAXI must be a solution that meets all functional and technical characteristics according to the document published on the TAK website “EFS Implementation Specifications”.

In each vehicle that performs TAXI services, an EFS connected to a taximeter must be installed.

The taximeter that is connected to the EFS must be previously certified by the relevant competent institutions that support the connection to the EFS.

In each transport vehicle - TAXI, an EFS must be installed. The connection must be, a "TAXIMETER" with the EFS and through the EFS, the printing of the fiscal coupon and the transmission of data to the TAK Information System in real time are enabled.

The provision of TAXI services must be precisely linked to the registration of services and must operate under the mandatory rule that a fiscal coupon is generated for each service.

Due to the existence of different tariffs for TAXI services, the EFS to be installed must enable the registration of all TAXI services.

2. ***Registration and content of the fiscal coupon for TAXI services***

The fiscal coupon, in addition to the requirements set out in Article 7 of Administrative Instruction (MF) No. 01/2026, must also contain:

- Identification data for the TAXI driver;
- Type of service;
- Departure time;
- Arrival time;
- Duration;
- Kilometres travelled;

Examples of fiscal coupons for the provision of Taxi services are presented in Appendix "H" of this document.

3. ***Communication interruptions***

To ensure the continuity of fiscalization and data integrity, the EFS must detect, record and report any communication interruption with peripheral devices (such as taximeters). In cases where communication with the TAK Information System is not established, then the rule of printing fiscal coupons with the description "OFFLINE" applies.".

Article 31 - TAK Information System (TAK Information System)

1**. Purpose**

The Kosovo Tax Administration Information System, within the fiscalization system, enables the coupon, validation, registration and verification of fiscal coupons generated by Electronic Fiscal Software (EFS), through standardized integration interfaces.

The fiscalization system enables the fiscal coupons generated by EFS/POS to be transmitted electronically and automatically to TAK, described in the document published on the TAK website "EFS Implementation Specifications".

2. **Technical documentation**

TAK publishes and maintains technical documentation for the integration of EFS with the TAK Information System.

TAK provides separate environments for testing and for productive use. The transition to the productive environment is made according to the certification/authorization procedure determined by TAK.

Technical documentation may include:

1. the data structure of the fiscal coupon;
2. endpoints for integration;
3. the method of EFS/POS registration;
4. the method of providing a digital certificate;
5. the method of digital signature;
6. the format of requests and responses;
7. error codes;
8. reference examples of implementation;
9. the current version of the technical specifications.

3. **Secure data exchange**

Communication between EFS and the TAK Information System is carried out through secure communication channels, described in the document published on the TAK website "*EFS Implementation Specifications*".

The TAK Information System accepts only requests sent through the method specified in the TAK technical documentation.

4. **EFS/POS registration and digital certificates**

Each EFS/POS instance used for the generation and transmission of fiscal coupons must be registered in the TAK Information System according to the procedure specified by TAK.

During registration, data such as:

1. Unique Identification Number of the taxpayer;
2. fiscalization number;
3. unit number;
4. POS identifier;
5. application identifier or EFS code;
6. request for a digital certificate.

After registration, the EFS/POS is provided with a digital certificate or other identification mechanism specified in the technical specifications of the TAK.

5. **Digital signature of the fiscal coupon**

EFS/POS must sign the fiscal coupon before transmission to the TAK Information System using the private key generated through the TAK Systems according to the specified instructions.

The digital signature is made with a private key associated with the relevant EFS/POS instance, according to the algorithm and format specified in the TAK technical specifications.

The TAK Information System accepts for processing only fiscal coupons that are signed and structured according to the TAK technical specifications.

6. **Acceptance of the fiscal coupon**

The request for transmission of the fiscal coupon from the EFS to the TAK Information System contains the fiscal coupon data and the corresponding digital signature, in the format specified by TAK.

The data format, serialization method, signature method and structure of the request are described in the document published on the TAK website “EFS Implementation Specifications”.

7. **Verification of fiscal coupon by citizen**

The TAK Information System enables verification of fiscal coupon through QR code, Unique Identification Number of Fiscal Coupon or other mechanism determined by TAK.

Verification is carried out according to the document published on the TAK website “EFS Implementation Specifications”.

8. **Changes in technical specifications**

TAKpublishes versions and changes to technical specifications that affect the integration of EFS with the TAK Information System.

Changes in data format, endpoints, signature method, authentication method or validation method are implemented according to the deadlines determined by TAK.

9. **Scope limitation**

This article defines the requirements for the interface and data exchange between EFS and the TAK Information System. For any changes, TAK will notify the public in advance in written or audio-visual form through TAK's official communication channels, specifying the duration of the implementation of those changes.

Article 32

Entry into force

This document enters into force on the date of signature by the Director General of the Tax Administration.

Mentor Hyseni

Date ____/____/2026 _____

Director General of TAK

ANNEX FOR EFE/FS

ANNEX “A”

Fiscal Logo

All EFE/FS must have the ability to generate and support printing of various texts or even graphics. The dimension of the fiscal logo is min 15 mm x 8 mm, max 20mm x 10mm.

ANNEX “B”

Fiscal coupon examples

The VAT rates of 8% or 18% in the following examples are examples of the calculation rate, while in practice the applicable rates according to the applicable VAT legislation should be used.

Fiscal coupon for normal sales

FISCAL COUPON

RKS MF

ANNEX “E”

References for creating a file for transmission

The electronic signature must contain all the information of the fiscal documents that are transmitted to the TAK server.
The following are the references for creating the file that is transmitted to the TAK server in Binary format.
The TAG table must be formulated according to the highest-level hierarchy according to the types of documents that the server requests from the EFE/FS.

List of level I documents

- Any document as in ECJ;
- Any document in MF (VAT rates, fiscalization data, VAT changes, error list, etc.)
- Registered items;
- MF security codes (checksum of MP, MF);
- X report;
- Current COUPON in processing;
- Reading of binary block from MF;
- Reading of binary block from ECJ;
- Time/date in EFE/FS;
- Etc.

Level II example with fiscal COUPON document

Fiscal coupon

- Header
  - Name;
  - Address;
  - NF/UIN;
  - VAT;
  - Operator;
  - 255 closes the hierarchy.
- Sales
  - Item 1, type (piece, kg), quantity, sales price, row total, VAT rate;
  - Item 2, type (piece, kg), quantity, sales price, row total, VAT rate;
  - 255 closes the hierarchy.
- Footer
  - Total in Euro;
  - CASH;
  - VAT D 8%;
  - VAT E 18%;
  - Total excluding VAT;
  - Document number and number of items;
  - Date and time of COUPON issuance;
  - EFE/FS ID;
  - Fiscal coupon number.

ANNEX FOR EFS

Fiscal Logo

All EFSs must have the ability to generate and support printing of various texts or even graphics. The dimension of the fiscal logo is min 15 mm x 8 mm, max 20mm x 10mm.

ANNEX “F”

Examples of fiscal coupons (EFS)

The VAT rates of 8% or 18% in the following examples are only examples of calculation rates, while in practice the applicable rates according to the applicable VAT legislation should be used.
